INDEPENDENT AUDITOR'S REPORT

To the shareholder of ERGO Life Insurance SE

Report on the Audit of the Financial Statements

Opinion

We have audited the financial statements of ERGO Life Insurance SE, a company registered in accordance with the corporate law of the European Union (hereinafter the Company), which comprise the statement of financial position as of 31 December 2025, the statement of profit or loss, statement of comprehensive income, statements of changes in equity and cash flows for the year then ended, and notes to the financial statements, including material accounting policy information.

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company as at 31 December 2025 and its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the financial statements* section of our report. We are independent of the Company in accordance with the ethical requirements of Regulation (EU) No 537/2014 of the European Parliament and of the Council (Regulation (EU) No 537/2014) on specific requirements regarding the statutory audit of public interest entities that are relevant to statutory audit of public interest entities, the Law on Audit of Financial Statements and Other Assurance Services of the Republic of Lithuania that are relevant to audit of financial statements in the Republic of Lithuania and the International Ethics Standards Board for Accountants' International Code of Ethics for Professional Accountants (including International Independence Standards) (IESBA Code) as applicable to audits of financial statements of public interest entities. We have also fulfilled our other ethical responsibilities in accordance with Regulation (EU) No 537/2014 and the Law on Audit of the Financial Statements and Other Assurance Services of the Republic of Lithuania and the IESBA Code. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have fulfilled the responsibilities described in the *Auditor's responsibilities for the audit of the financial statements* section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the accompanying financial statements.

Key audit matters	How the matter was addressed in the audit
Assessment of the Liability for Remaining Coverage (LRC)	

As outlined in Note 14 to the financial statements, the liability for remaining coverage (LRC) as at 31 December 2025 was 200.4 million euro (gross of reinsurance contracts). Out of this amount 189.6 million euro has been measured under the variable fee approach (VFA, the measurement model for contracts with direct participation features), 8.1 million euro under the premium allocation approach (PAA, the simplified measurement model) and

Our audit procedures included, among others, evaluation of the appropriateness of the Company's accounting policies related to the measurement of insurance contract liabilities according to IFRS 17 *Insurance contracts* and whether assumptions and the methods for making the accounting estimates are appropriate and have been applied consistently.

Shape the future
with confidence

Key audit matters	How the matter was addressed in the audit
Assessment of the Liability for Remaining Coverage (LRC)	

2.7 million euro under the general measurement model (GMM, highly complex and mainly used in life reinsurance).

The measurement of LRC related to insurance contracts involves judgment over uncertain future outcomes, which involves setting various assumptions regarding the total settlement value of LRC. The determination of LRC related to insurance contracts requires the use of complex (actuarial) models and other computational tools for which it is important that their design and configuration is adequate, the assumptions used are appropriate and the input data is complete and accurate. The use of different actuarial techniques and assumptions could produce materially different estimates of liabilities related to insurance contracts. Therefore, we consider the LRC as a key audit matter.

Furthermore, the insurance service results, including insurance revenue, are also produced to a significant extent with the use of the same processes, tools and assumptions. The specific risk considerations of the Company are included below.

The key economic assumptions used are the discount rate applied to adjust the expected future cash flows for time value of money (including applicable illiquidity premium) and the 'cost of capital' percentage applied in the risk adjustment calculation.

For Life and Health insurance, the valuation of liabilities requires the application of significant judgement in the setting of operating assumptions such as expenses, lapses, mortality. Furthermore, the Contractual Service Margin (CSM) release for the period as well as the release of the expected incurred claims and expenses are important drivers in determining the insurance revenue for the period.

We refer to Note 14 "Insurance and reinsurance contracts", Note 6 "Insurance revenue" and Note 7 "Insurance service expense" of the financial statements.

We involved our actuaries to assist us in performing audit procedures in this area. Our key audit procedures included evaluating the Company's methodology for calculating LRC and obtaining understanding and evaluating the design of internal controls in this respect. Furthermore, we performed the following procedures:

1. Testing of the accuracy and completeness of data as utilized by the Company to value estimated future cash flows by reconciling such data to the underlying records.
2. Evaluation of the mathematical accuracy and methodological compliance of the calculation tools developed by the Company for VFA, GMM and PAA measurement models under IFRS 17 *Insurance Contracts*.
3. Evaluation of the assumptions on the discount rate (including illiquidity premium) and the cost of capital percentage used in valuation of insurance contract liabilities based on Company's and market data.
4. Evaluation of the nature, timing and completeness of changes in key assumptions, models and methods, including their impact on financial reporting.
5. Performing analytical procedures, including period to period analysis of changes in present value future cash flows.

We evaluated ERGO Life Insurance SE disclosures in relation to insurance contract liabilities and insurance service result in accordance with IFRS 17 *Insurance contracts*. In particular, we evaluated that disclosures adequately convey the degree of estimation uncertainty.

Other information

Other information consists of the information included in the Company's 2025 management report, other than the financial statements and our auditor's report thereon. Management is responsible for the other information presentation.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon, except as indicated below.

**Shape the future
with confidence**

In connection to our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

We also have to evaluate, if the financial information included in the Company's management report, corresponds to the financial statements for the same financial year and if the Company's management report has been prepared in accordance with the relevant legal requirements. In our opinion, based on the work performed in the course of the audit of financial statements, in all material respects:

- ▶ The financial information included in the Company's management report, corresponds to the financial information included in the financial statements for the same year; and
- ▶ The Company's management report has been prepared in accordance with the requirements of the Law on Reporting by Undertakings and Groups of Undertakings of the Republic of Lithuania.

Responsibilities of management and those charged with governance for the financial statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with International Financial Reporting Standards as adopted by the European Union, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Company's financial reporting process.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- ▶ Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- ▶ Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- ▶ Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- ▶ Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.

**Shape the future
with confidence**

▸ Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on Other Legal and Regulatory Requirements

Other requirements of the auditor's report in accordance with Regulation (EU) No 537/2014 of the European Parliament and of the Council.

Appointment and approval of the auditor

In accordance with the decision made by shareholder we have been chosen to carry out the audit of Company's financial statements the first time on 27 December 2018. Our appointment to carry out the audit of Company's financial statements in accordance with the decision made by shareholder has been renewed annually and the period of total uninterrupted engagement is 6 years.

Consistency with the audit report submitted to the audit committee

We confirm that our opinion in the section *Opinion* is consistent with the additional Audit report which we have submitted to the Company and the Audit Committee.

Non audit services

We confirm that to the best of our knowledge and belief, services provided to the Company are consistent with the requirements of the law and regulations and do not comprise non-audit services referred to in Article 5(1) of the Regulation (EU) No 537/2014 of the European Parliament and of the Council.

Throughout our audit engagement period, we have not provided any other services except for the audit of the financial statements and translation assistance services.

The partner in charge of the audit resulting in this independent auditor's report is Kestutis Juozaitis.

Member of the Supervisory Board of ERGO Life Insurance SE (code: 110707135; address: Geležinio Vilko st. 6, Vilnius) and ERGO Insurance SE (code: 10017013; address: Veskiposti 2/1, Tallinn). Member of the Audit Committee ERGO Insurance SE (code: 10017013; address: Veskiposti 2/1, Tallinn). Head of Global Health Actuarial and Steering at ERGO Group AG, Dusseldorf.

ERGO Life Insurance SE: Result for 2025

Insurance revenue	EUR 73.66 million
Total assets	EUR 331.41 million
Investments in financial instruments	EUR 282.27 million
Insurance contract liabilities	EUR 227.76 million
Equity	EUR 70.57 million
Profit for the year	EUR 6.79 million
Total comprehensive income/expense	EUR 8.76 million
Return on equity ¹	10.0 %
Insurance contracts in force	96,297
Offices	8 in Lithuania, 20 in Latvia, and 1 in Estonia
Employees (FTE) at year-end	in total – 308, of which 133 in Lithuania, 130 in Latvia and 45 in Estonia

¹ Calculated by dividing Net income by average of Total Equity. Average Total Equity = (Equity at Beginning of Time Period + Equity at End of Time Period) / 2.

Economic environment

The European Union economy recorded modest growth in 2025, supported by resilient domestic demand, gradually improving financing conditions, and a robust labour market. According to the European Commission's Spring 2025 Economic Forecast, real GDP increased by 1.1% in the EU and 0.9% in the euro area during 2025, as inflation continued to moderate toward the ECB's 2% target. Disinflation progressed throughout the year, with euro-area HICP easing toward 2.1% by mid-2025, reflecting fading energy base effects and moderating core price pressures.

Labour market conditions remained strong during 2025. Rising real wages supported private consumption, while employment growth contributed to sustained household spending. The EU unemployment rate continued to trend downward, supported by stable labour demand and easing inflation pressures. Investment activity improved, aided by Recovery and Resilience Facility (RRF) funding and more favourable financing conditions.

Fiscal balances in 2025 reflected ongoing adjustment, with the EU general government deficit around 3.3% of GDP and public debt edging slightly higher. External conditions remained challenging due to trade tensions, slower global activity, and energy-price volatility, which limited export growth despite resilient internal demand.

Although 2025 concluded with moderate growth, the European Commission forecasts that EU and euro-area GDP growth will rise to around 1.4–1.5% in 2026, supported by recovering investment, improved global demand, and stabilising labour markets. Euro-area inflation is projected to ease further to around 1.7% in 2026, continuing the disinflation path observed in late 2025. Labour market performance is expected to remain strong, with EU unemployment approaching 5.7%, a historical low.

Economic developments in the Baltic States

All three Baltic economies returned to positive growth in 2025, although momentum varied across countries. According to Luminor's Baltic Economic Outlook (2026), Lithuania expanded by 2.9%, Latvia by 2.1%, and Estonia by 0.6% in 2025 — the latter marking Estonia's exit from a three-year recession. Growth was primarily supported by recovering private consumption as inflation moderated and real incomes improved, while EU funding and defence-related spending supported investment.

Estonia experienced a modest rebound, with growth of 0.6% in 2025 after several years of contraction. The recovery was supported by stabilising external demand and a gradual improvement in domestic investment conditions, although the economy remained sensitive to fluctuations in Nordic construction cycles.

Latvia recorded 2.1% growth in 2025, reflecting improving household purchasing power and broad stabilisation in domestic demand. Inflation moderated, improving real wages, while public-sector reforms and temporary fiscal pressures shaped the budgetary position.

Lithuania continued to lead the region in 2025 with 2.9% growth, underpinned by a diversified export base, resilient labour markets, and sustained EU-funded investment. Its economy has expanded significantly over the past decade, outpacing regional peers.

The Baltic region is expected to see accelerated growth in 2026, driven by strong private consumption, supportive fiscal conditions, and improving export prospects, especially in Scandinavian markets.

Luminor forecasts the following 2026 GDP growth rates:

- Lithuania: 3.6%
- Latvia: 2.5%
- Estonia: 2.0%

Longer-term challenges relate to demographic trends, labour-market tightness, and maintaining cost competitiveness. Investment in high-tech sectors and policies supporting high-skilled labour mobility are expected to play an increasing role in sustaining growth.

Main risks:

- The geopolitical situation, particularly the ongoing war in Ukraine, continues to pose significant risks and heightened uncertainty which in turn deters investments;
- The Baltic economies face fluctuating energy prices, challenging exports and low domestic demand. Public finances are increasingly strained by rising expenditures on defense, social benefits, and public sector wages;
- Labor markets remain tight. This is characterized by low unemployment rates and persistent labor shortages. Such conditions lead to upward pressure on wages;
- Aging of population and decreasing population puts additional strains on labor market and then social security system.

Regulatory environment

The main law for insurance industry in Lithuania is the Law on Insurance of the Republic of Lithuania; European Parliament and Council Directive (EU) 2016/97 regarding the distribution of insurance products, Directive 2009/138/EC of the European Parliament and of the Council on the initiation and performance of insurance and reinsurance activities (Solvency II).

In 2024, the global minimum tax came into force, establishing a 15% minimum corporate tax rate for large multinational enterprises. This initiative, led by the OECD and supported by over 140 countries, aims to prevent tax base erosion and profit shifting by ensuring that multinational corporations pay a fair share of taxes, regardless of where they operate. The reform is expected to enhance tax transparency and create a more level playing field in global taxation.

Under the Insurance Distribution Directive and implementing and delegated Regulations thereof, the aim is to better protect the interests of customers and increase the transparency of insurance companies, in particular through the provision of insurance-based investment products, including:

- stronger focus on identification of customer needs and acting in the best interest of the insured;
- greater transparency in insurance activities by providing sufficient information to the insured on an insurance product, their parts, intermediaries and their remuneration, potential conflicts of interest (if they are not managed effectively, etc.);
- stronger focus on management of conflicts of interest in order to prioritise activities of the insurance company to provide the best conditions for clients and not to serve business interests;
- rules on transparency and business conduct to help customers avoid buying products that do not meet their needs.

The Regulation 2016/679 of the European Parliament and of the Council (EU) effective as of 27 April 2016 on the protection of individuals with regard to processing of personal data and on the free movement of such data repealing Directive 95/46/EB (General Data Protection Regulation) (hereinafter – [GDPR](#)) is of significant importance to activities of the Insurance Company. The GDPR is a European Union legal act of direct application. In implementing the General Data Protection Regulation (GDPR), the Company is continuously maintaining a high level of data protection in its operations, i.e. regularly reviews and updates its internal procedures governing the processing of handling of personal data in order to comply with the provisions of the applicable legal regulation (laws, requirements established by the State Data Protection Inspectorate) and clarifications of relevant court decisions. The Company's employees improve their knowledge in the field of personal data protection through trainings and competence tests.

A further legislative package with significant impact on the activities of ERGO Life Insurance SE related to distribution of life insurance products include the Directive 2018/843 of the European Parliament and of the Council (6th AML Directive) and the Law on the Prevention of Money Laundering and Terrorist Financing of the Republic of Lithuania, which impose requirements comprising control measures implemented both at the time of concluding contracts (appropriate customer due diligence and customer's money-laundering risk assessment) and conducting monitoring of the business relationship, including payment of insurance claims. The 6th AML Directive has increased transparency of information on ultimate owners/beneficiaries of legal entities. The Directive also introduced some amendments concerning the identification of politically exposed persons and customer due diligence. The Company shall continuously strengthen the AML/CFT (Anti-Money Laundering/Combating the Financing of Terrorism) area in order to properly manage the relevant risks.

On 10 March 2021, [Sustainable Finance Disclosure Regulation \(SFDR\)](#) came into force. This document aimed at disclosing to customers information about the Company's (ERGO Life Insurance SE) approach to sustainability risks and the maximum adverse effect on sustainability factors to ensure that customers are equipped to make informed investment decisions. To this end, and in line with the requirements of the SFDR, the Sustainability Policy has been published on the Company's website, demonstrating how sustainability risks are integrated into the Company's investment decision-making processes. Following the entry into force of the Regulatory Technical Standards (RTS), the companies disclose information on adverse impacts on sustainability at the corporate level using a single format, including sustainability impact indicators specified therein.

On 1st of January 2023 the 17th IFRS "Insurance Contracts" came into force of and the Company's accounting is carried out according to the new requirements. The purpose of the new standard is to establish completely new, uniform rules for evaluating insurance contracts, ensuring better comparability of reports from different insurers, as well as providing a lot of new information for recipients of financial statements.

[Regulation \(EU\) 2022/2554 on digital operational resilience for the financial sector \(Digital Operational Resilience Act, DORA\)](#) from 17 January 2025 is directly applicable EU legal act which aims to increase the digital operational resilience of the EU financial sector by strengthening the risk management and incident reporting systems of financial entities (such as banks, insurance undertakings, electronic money and payment institutions, investment firms, etc.), information and communication technology (ICT) and third parties. DORA establishes a regulatory framework for digital operational resilience which requires all undertakings covered by this regulation to ensure the operational capacity to withstand, respond to and recover from all types of ICT-related disruptions and threats. These requirements are uniformly applied in all EU Member States and define ICT risk, establish rules on ICT risk management, incident reporting, operational resilience testing and ICT third-party risk monitoring.

On 1st July 2024 Lithuania finalised transposition of European Union Corporate Sustainability Reporting Directive (CSRD) and European Sustainability Reporting Standards (ESRS) requirements into local legislation which resulted in amendments to sixteen laws. Legal acts define principles how companies shall prepare, report and publish information about their sustainability impacts, sustainability risks, opportunities and overall related sustainability performance. In accordance with these legal requirements ERGO Life Insurance SE is exempted from the obligation to prepare a sustainability report as its parent undertaking organisation has prepared consolidated group sustainability statement in accordance with CSRD and ESRS requirements. Parent undertaking organisation and its consolidated group sustainability statement related information:

- Consolidated group sustainability statement is provided by Munich RE, headquarters address: Königinstr. 107, 80802 Munich, Germany
- Website address of the group annual consolidated sustainability statement: <https://www.munichre.com/en/company/investors/reports-and-presentations/annual-report.html>

Financial performance of ERGO Life Insurance SE

At the year-end, ERGO Life Insurance SE had assets of EUR 331.4 million (2024: EUR 321.0 million). Investments in financial instruments amounted to EUR 282.3 million (2024: EUR 269.0 million), debt instruments at fair value through other comprehensive income accounted for 47.6% (2024: 52.1%), debt instrument at amortised cost accounted for 5.6% (2024: 5.8%), equity and debt instruments at fair value through profit or loss accounted for 46.8% (2024: 42.1%) of the total. Altogether, investments in financial instruments accounted for 85.2% (2024: 83.8%) of total assets. Insurance contract liabilities totalled EUR 227.8 million (2024: EUR 227.1 million), accounted for 87.3% (2024: 88.8%) of total liabilities and 68.7% (2024: 70.8%) of total assets.

Insurance activities

Gross insurance revenue by line of business

<i>In euros</i>	2025		2024		Change	
	Insurance Revenue	Share of class, %	Insurance Revenue	Share of class, %	Insurance Revenue	Share of class, pp
Life insurance contracts	26,554,486	36.1	22,750,427	34.6	3,804,059	1.5
Health insurance contracts	47,104,745	63.9	42,969,210	65.4	4,135,535	-1.5
Total	73,659,231	100.0	65,719,637	100.0	7,939,594	

In 2025, ERGO generated insurance revenue of EUR 73.7 million, a 12.1% increase compared to the previous year. The largest classes were life VFA (Variable Fee Approach) /GMM (General Measurement Model) insurance contracts and health PAA (Premium Allocation Approach) insurance, the revenue of which amounted to EUR 26.6 million or 36.1% and EUR 47.1 million or 63.9% of the portfolio respectively.

Incurred claims and benefits paid by insurance class:

<i>In euros</i>	2025		2024		Change	
	Incurred claims and benefits	Share of class, %	Incurred claims and benefits	Share of class, %	Incurred claims and benefits	Share of class, pp
Life insurance contracts	6,067,770	14.7	5,697,698	16.2	370,072	-1.5
Health insurance contracts	35,280,850	85.3	29,415,555	83.8	5,865,294	1.5
Total	41,348,620	100.0	35,113,254	100.0	6,235,366	

Claims and benefits in 2025 totalled EUR 41.3 million (2024: EUR 35.1 million). The largest share of claims was settled in Health insurance: EUR 35.3 million or 85.3% of claims incurred. The next-largest class was life insurance, where claims and benefits totalled EUR 6.1 million or 14.7%.

Investment activities

Strategic investment management is the responsibility of the company's asset and liability management team, which includes specialists from Baltic states and Germany. In line with the investment management system, tactical investment management has been outsourced to an external service provider. Since 1st of October 2020, immediate contact for company in all investment related matters is GIM – Group Investment Management department of Munich RE, which delivers the service in accordance with the strategic investment management plan and risk profile approved by the Management Board of ERGO Life Insurance SE.

In 2025 company maintained conservative investment approach whereas income on assets with interest rate risk amounted to 2.95 million euros. Realisation of debt securities produced a profit of 0.13 million euros. The fair value reserve decreased by 1.2 million euros while fair value reserve through profit and loss statement decreased by 1 thousand euros. Dividend income and income from loans amounted to 2.98 million euros. Investment management expenses accounted for 0.16% of the carrying value of managed investments. Thus, the overall yield of the investment portfolio was 2.54 %.

Development

Overview and key focus areas

Insurance revenue by ERGO Life Insurance SE during the reporting year amounted to 73.7 million euros, i.e. 12.1% more than in 2024 (2024: EUR 65.7 million). In terms of insurance revenue in the separate insurance groups, the most significant increase was in Index-linked and unit-linked insurance in Lithuania, 8.2 million euros, i.e. 33.1% more than in 2024 (2024: EUR 6.1 million). In Baltics other life Insurance reached 8.2 million euros, i.e. 45.1% more than in previous year (2024: EUR 5.7 million). However, a decline was recorded in Insurance with profit participation reaching 5.3 million euros, i.e. -24.6% (2024: EUR 7.0 million) in Baltics. In overall Life Insurance revenue increased by 16.7%.

Fast and fair insurance claim settlement is the main goal of the insurance company. During the reporting year, accumulative Claims and benefits totalled EUR 41.3 million (2024: EUR 35.1 million).

Legal structure of the company

ERGO Life Insurance SE is one of the leading insurance companies in the Baltic States, offering life and health insurance to both private and corporate clients.

ERGO is operating in the Baltic countries, with the headquarters in Lithuania and branches in Estonia and Latvia. ERGO is operated in the legal form of *societas Europaea*, a public company registered in accordance with the corporate law of the European Union.

ERGO Life Insurance SE is 100% owned by ERGO International AG, Germany, which is part of the ERGO Group AG, Germany. ERGO Group is one of the major insurance groups in Germany and Europe.

The ERGO Group is represented in over 20 countries worldwide and focuses on its core and growth markets in Europe and Asia. ERGO offers a comprehensive range of insurance policies, pensions, investments and services. Three separate units operate under the umbrella of ERGO Group AG: ERGO Deutschland AG, ERGO International AG and ERGO Technology & Services Management AG. About 38,700 people worldwide work as salaried employees or sales agents for ERGO Group. The excellent financial strength of the ERGO Group is confirmed by the ratings of independent rating agencies: AA- by Fitch, A+ by Standard & Poor's.

ERGO Group is part of Munich Re (Münchener Rückversicherungs-Gesellschaft AG, Munich) – one of the world's leading reinsurers and risk carriers. Munich Re stands for exceptional solution-based expertise, consistent risk management, financial stability and client proximity. Munich Re has well over a century of international experience and is a member of the DAX 40 and EURO STOXX 50. MEAG, the asset manager and fund provider of Munich Re, also manages ERGO's investments and has total assets under management of €368 billion.

Munich Re's excellent ratings reflect the strength of its balance sheet. Strong sustainability ratings, on the other hand, speak for the high standards to which we hold our operations in terms of environmental, social and governance criteria (ESG): A+ superior A.M. Best, AA very strong Fitch, AA very strong Standard & Poor's, Leader in industry rating by Sustainalytics, Good ESG rating by MSCI, Prime rating by oekom research.

ERGO Group collaborates with the world's leading reinsurance companies, carefully managing potential risks to ensure that claims are covered professionally regardless of size.

Information on own shares

In 2025, the Company did not hold, acquire, and transfer its own shares.

Strategic vision

Our strategy focuses on putting customers first, recognising that employees who feel supported are best equipped to provide the best service they can to the outside world.

We make sure that customers can trust us and see us as a reliable long-term partner. We foster a culture where our team members feel valued and encouraged to contribute. By connecting people – our customers and ourselves – we aim to achieve sustainable success and fulfil our commitments.

Our Brand Promise: Simple because it matters. We aim to make insurance as simple, fast, and convenient as possible for our customers. To achieve this, we seamlessly combine expert advice with

modern mobile and online services, giving our customers the flexibility to choose how and when they interact with us.

The essence of our ERGO brand – “Making insurance easier” – guides everything, we do. As an active companion at every stage in life, as an equal partner, and as a positive driving force for the future. Our Team: Grow together. Our success as an employer comes from within. It is the people who work here. It is the people who make us who we are – and make us special. For them, and for those who will join us in the future, we aim to create a working environment that celebrates diversity and allows everyone to flourish.

We strive to provide opportunities to shape the future of ERGO together and support one another along the way. Our goal is to make ERGO a place where we can truly grow together.

Our engagement

Based on ERGO International engagement survey, our employees’ sustainable engagement is extremely high in the Baltics - 92% in 2025 – with a participation rate of 95%. These results show that most of our people feel as a part of our company and highlight the effectiveness of our strategies.

Sustainability overview

Our dedication

Insurance is a long-term business: we insure people and companies for the future. We want to create long-term value for our shareholders, customers, employees and society. At ERGO, we understand that protecting the environment and addressing climate change is crucial for our future, and it's also a vital part of our corporate governance. That is why in Year 2019 we have set an ambitious objective to significantly reduce carbon emissions in our business operations, insurance, and investments as part of our "Climate Ambition 2025" initiative. In December of the reporting year, the new Climate Ambition 2030 was adopted as part of the Munich Re Group Ambition 2030. As part of this climate strategy, ERGO as part of Munich Re is defining new climate targets for own operations, insurance business and investments for the end of financial year 2030, starting from the base year of 2025. Our goal is to contribute to the achievement of international climate targets by providing active support to verified climate protection projects.

At ERGO, we are committed to following the ten principles of the United Nations Global Compact. This includes our dedication to preserving and promoting fundamental values, such as human rights, humane working conditions, environmental protection, and anti-corruption efforts, within our sphere of influence.

We also comply with domestic and international environmental protection laws, as well as other binding obligations and self-commitments to environmental protection. We stand by the Principles of Sustainable Insurance (PSI) and the Principles of Responsible Investments (PRI).

We believe in creating a work environment that fosters performance, motivation, and individual diversity. We offer flexible working hours, development opportunities, and strive to inspire our employees through automated processes and agile working methods as we move forward with the process of digital transformation.

We follow Munich Re and ERGO Groups ESG criteria, that stands for environmental, social and governance criteria, which describe sustainable targets and approach.

	<p>Environment: lowering carbon emissions, reducing resource consumption and preventing environmental damage.</p>	
	<p>Social sector: the upholding of human rights and labour rights, equality, health protection.</p>	
	<p>Governance: responsible corporate governance, dialogue with interest groups, transparent reporting.</p>	

Economical Liability

At ERGO we believe that good governance is an essential prerequisite for sustainable value creation. Our key principles and convictions apply for all our employees and form the framework for our sustainable actions. In everything that we do, we act on the basis of common values, respecting the rights of others and handling the data entrusted to us with care and attention.

We have supplemented the applicable laws and external regulations with in-house codes of conduct for employees and sales staff. These set out binding rules for what we believe constitutes ethical business conduct. All managers must declare their private interests before starting work.

External service providers are required to sign a Corporate Responsibility Clause and confirm Supplier Code of Conduct. The ERGO Anti-fraud Management Guideline, includes principles and rules on preventing, uncovering, and investigating economic crimes.

In order to prevent money laundering, a Group Money Laundering Officer and a deputy were appointed for ERGO Group AG in line with the statutory requirements. Upon making donations, we do not accept any benefits or favours in return.

We grant possibilities for our employees and customers to give feedback on compliance breaches via our homepage; all claims are solved or given feedback about actions taken within 5 working days.

Employees and external third parties – such as customers and suppliers as well as other business partners – can additionally report suspected breaches on the ERGO international whistle-blowing portal. All employees and managers undergo regular training with the aim of preventing compliance breaches.

Digitalization and data protection

ERGO places a strong emphasis on driving forward the digital transformation in our corporate strategy. We recognize the potential of digitalization to meet the evolving needs and expectations of our customers, and to maintain our long-term success.

To streamline our operations, we have integrated several robots into our processes, enabling quicker claims handling, improved NPS (Net Promoter Score) processes, more efficient pricing and controlling. We are also proud to offer opportunities to interns who have contributed to programming some of these robots, and many of them have continued to work with ERGO.

At ERGO, we place a high priority on protecting our customers' data by consistent focus on key cybersecurity protection areas: the confidentiality, availability, and integrity of information. Requirements for data protection are driven by statutory and supervisory regulations and are an integral part of ERGO corporate strategy. We collect data in a transparent manner and only to the extent necessary for specific purposes. We have developed in-house guidelines and adopted voluntary industry commitments to supplement legal requirements. Regular employee training is also conducted to ensure compliance with data protection requirements and raise awareness about data protection issues.

In this year we continued development of various digitalization products, increasingly moved towards cloud-based services which helps us to reduce our direct environmental impact as we continuously monitor our environmental footprint. We are continuously expanding and developing our online channels to offer convenient web-based services even in the more traditional insurance industry.

Human rights

Safeguarding human rights is an integral part of ERGO's value-based corporate governance. We uphold this commitment through the Munich Re Policy Statement on Human Rights, which is also applicable to ERGO. Our dedication to the protection of human rights is reflected in our adherence to the UN Principles on Business and Human Rights, the International Human Rights Charter, the UN Global Compact, and the International Labour Organisation Declaration on Fundamental Principles and Rights at Work.

These principles guide us in preserving, promoting, and implementing fundamental values related to human rights, humane working conditions, environmental protection, and anti-corruption efforts within our sphere of influence.

ERGO Baltics is also following the „Supply Chain Due Diligence (Human Rights) Guideline“. This guideline defines the requirements regarding the application of human rights due diligence in the supply chain, meaning - our own operations and procurement of goods and services (via direct and indirect suppliers). This guideline declares the principles on respecting and protecting the human rights: the right to healthy, safe and dignified working conditions; the right to equality and non-discrimination; the right to adequate living conditions.

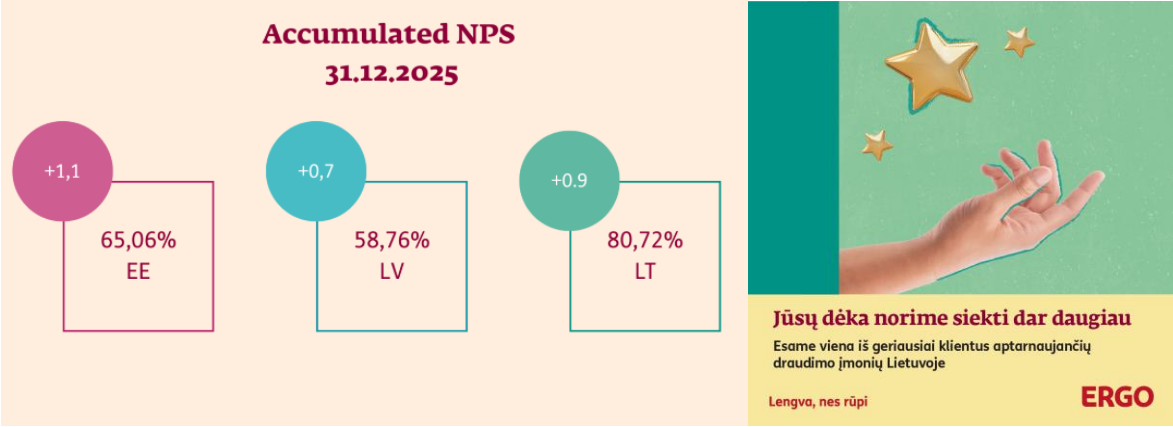

ERGO Baltics continues cooperation with the Diversity Charters. By joining we committed to create an inclusive work environment reflecting diversity, celebrating differences and encouraging every employee to feel dignified, valued and respected.

Social responsibility

Customer orientated services and products

At ERGO, people are at the heart of our business. We combine customer satisfaction with employee engagement, fostering a culture of diversity, collaboration, and growth. Our goal is to make insurance simple, fair, and approachable while providing a sense of security and thinking responsibly about the future. Customer satisfaction is central to our culture. ERGO Baltics employees at all levels understand its importance and prioritize it in their daily work. This applies not only to client-facing staff but also to back-office teams, who recognize how their work impacts customer expectations. We systematically gather and analyze feedback, taking action to address issues, improve service, and continuously enhance the customer experience.

Customer satisfaction is central to our culture. Our pan-Baltic NPS, a key KPI for all employees, continues to grow, reflecting the feedback we use to improve processes and recognize our teams. In 2025, ERGO was recognized for exceptional customer service in Estonia and Latvia, with Lithuania ranking second (Dive 2025).

Sponsorships / social responsibility actions 2025

As in previous years, ERGO focuses on three global challenges that are closely associated with our core business: mitigating the effects of climate change, improving access to healthcare and enhancing risk awareness.

Our activities are guided by the United Nations Sustainable Development Goals, which describe the key challenges of our time.

While projects are carried out locally, group-wide reporting on activities and expenditures ensures transparency and underpins our social commitment reporting. We prioritize initiatives that align with our business activities, support them, and provide added value to our employees and clients.

During 2025, ERGO Lithuania donated 5,000 euros to **SOS Children Village** in Lithuania.

ERGO financial support was used for day care centres where children gather to spend some their free time. It is a very important place for Ukrainian refugees' children as well, so we aimed this charity to support them and their integration.

For the second year in a row **Pie Day** was organized in Lithuanian headquarter and other sales offices and it was a great success. The main idea was to bake pies, take them to work and sell it to the colleagues. The money collected for these pies was donated to the NGO of our choice. This year ERGO employees have voted and selected to donate this money to “Niekieno vaikai” foundation which takes care of lonely children in hospitals. We have collected around 850 euros. The money was donated for this good cause.

ERGO Lithuania has traditionally supported the Vilnius International Film Festival **Kino pavasaris**, which celebrated its' 30th anniversary, and continued to serve as one of its main sponsors. ERGO sponsored the programme "Today's Films for Tomorrow", which focuses on themes such as migration, human rights, tolerance. These values are very important to us as a company and as a team in our daily work.

For the fifth consecutive year, our Lithuanian colleagues volunteered during the environmental, educational, and cultural festival **Let's Do It by the Sea**, held on the last weekend of August. Volunteers cleaned the beach section from Melnragė Pier to Giruliai Beach, and over 5,000 liters of waste was collected in three hours.

In spring, ERGO Estonia, Latvia, and Lithuania organised local forest-planting initiatives.

In Estonia, we continued ERGO's preventive action competition, launched in 2022.

In 2025, nine outstanding initiatives from the previous year were shared with the wider public via our media partner Postimees. The fourth ERGO Prevention Action of the Year, "**Koolipsühholoogide nõuandeliin 1226**" (eng. School Psychologist Helpline), which helps students and schools access professional psychological support and guidance to promote mental health and well-being.

In cooperation with the Estonian Olympic Committee, we awarded the **ERGO Young Athletes Scholarship** for the ninth time. A total of 25,000 euros in scholarship funds, including the special scholarships “My First Sponsor” and “Fans’ Favorite”, were divided between seven individual athletes and two teams.

For the 24th year, ERGO Latvia has been providing scholarships to support students without parental care or in financial difficulties in the 2025/2026 academic year. This academic year, ERGO, in cooperation with the **Vitolu Foundation**, awarded scholarships to nine students.

People management

ERGO is one of the most valued and recognized employers in the Baltics. Since 2023 we have been in the top of the best employers’ rank by CV-Online in Latvia and Lithuania. Also, all three countries are acknowledged as a workplace that fosters diversity and inclusion (LT: rewards received in 2023 and 2024; EE: award in 2024; LV: Diversity Champion 2024; Diversity is Power 2024 (Silver category) + it was renewed in 2025). Additionally, in 2025 Lithuania has been awarded as a company ensuring safety and the most favorable emotional environment, while Estonia - Health Promoting Workplace. Moreover, all three countries are labelled as a family friendly company (LV: in 2023 + the award renewed in 2025; EE and LT: since 2022). Lastly, Estonian Chamber of Commerce and Industry ranked us in TOP 10 best insurance company in the financial sector in 2023.

ERGO Baltics in Estonia, Latvia and Lithuania were also awarded with Top Employer certificate in the end of 2025, becoming the first Top Employer recognized insurance company in the Baltics. Additionally, Top Employer Europe certification was granted the first time for ERGO Group, Baltics being influential part of the award.

We are working consistently in order to improve the employee experience in all aspects. This is done through specific programs, training sessions and information flow/internal communication.

ERGO Baltics strategy that was renewed in 2023 is based on people – our customers and the team. We want to show that ERGO is focused on both, collective and individual success and offers opportunities for personal growth. And we want to reach people who are ready to play a committed role in making the customer promise a reality. Additionally, PEOPLE commitment framework was introduced in 2025 for all managers to guide and manage the people as the center of our strategy. This framework defines the key thinking principles and behavioral patterns that are expected of every leader in the Baltic States. Each letter of “PEOPLE” framework has a concrete meaning which, in turn, sets a clear and shared commitment to ERGO Group core values: P – people; E – empowerment; O – ownership; P – performance; L – learning; E – evolution.

Diversity, equity and inclusion (DEI)

Diversity

Diversity means having a variety of people differing in such personal identity aspects as race, gender, age and more.

Equity

Equity refers to each person being treated fairly and given the same opportunities (for career, promotion, salary, etc.)

Inclusion

Inclusion means that all community members are embraced and encouraged to make meaningful contributions.

The term "DEI" commonly used in a modern leadership, stands for Diversity, Equity and Inclusion. Essentially, it means working in a place where you're treated fairly, you really feel that you belong here, and you are respected for who you are. This approach fosters diverse perspectives and experiences, making the workplace more creative and successful. Given that it is a key strategic priority for the ERGO Group.

Diversity is certainly wider than just age and gender topics. Diversity at workplace is important because collaboration among different colleagues gives us a precious opportunity to share the best practices, encourage out of the box thinking, foster diverse point of views leading to innovative approaches and non-standard solutions. We are lucky to have colleagues dispersed among all age groups, with the majority in 36-45 years group.

There is lot of talk about glass-ceiling in career management for woman, so ERGO Group has identified a specific gender ambition – to have both genders on different management levels with clearly defined quotas on each level.

ERGO Baltics has managed to achieve those targets, please see the picture below. We have a lot of efficient leaders, that is not so common in all companies and especially in insurance sector.

Data relating specifically to ERGO Life Insurance SE

Data: Q4 2025

- **Equity** in the workplace is crucial for creating a positive and productive work environment where every employee is treated fairly and given the same opportunities. There are specific actions at ERGO that one may have not considered as equity topics, some of them: Our salaries are determined according to the "Korn Ferry " (in LT) and "Figure" methodologies (in LV and EE), where job positions are evaluated rather than specific individuals.
- Implementation of EU directive on equal pay. This directive requires employers to ensure equal pay for equal work and introduce pay transparency measures - such as gender neutral pay structures, disclosed salary ranges and employee rights to request pay information - to prevent discrimination. In the course of 2025 ERGO Baltics has been evaluating jobs using gender-neutral criteria. Once these evaluations are completed, job grades (combining jobs of similar values into groups) and salary ranges will be developed – that will ensure the transparency of the compensation system in the Baltics.
- Promotion decisions are driven by skills and performance results, in such case eliminating possibilities for personal biases, prejudice and stereotypes.
- In case of discrimination or violated equal opportunities people can seek for anonymous support via the “Line of trust”.
- Opportunities for external candidates. We do encourage transparent job postings meaning that our job ads are competency and role-based with no gender-specific wording or keywords. Also, our job ads pass the message that we support equal opportunities for all applicants regardless of race, colour, religion, sex, sexual orientation, age, gender identity and/or national origin.

Inclusion in the workplace is vital for creating an innovative, forward-thinking, and engaging work environment that benefits both employees and the organization. It's also about activities that foster a sense of belonging.

To achieve this, we have implemented (and continue practicing) various initiatives to ensure an inclusive and supportive environment for all:

1. Development opportunities and focus on employees’ well-being:

- ERGO Baltic leaders' conference "Lead Together", held in Riga (October 1st – 2nd, 2025). Around 70 managers from all Baltic countries gathered at the event, the main purpose of which was to promote a culture of cooperation, inclusion and to foster a knowledge exchange.

- ERGO Shadowing Days. Started in 2023 in Estonia and Latvia, the initiative received an immediate success since our people had a chance to have a peak at the daily work of other departments and colleagues, understand what they are responsible for and what challenges they face. In 2025 147 applications were received in total in the Baltics (41 in Latvia, 37 in Estonia and 69 in Lithuania).

- ERGO Baltics Health Month. In 2025 employees in all three countries were involved in theoretical and practical sessions emphasizing how to improve physical, emotional and psychological health.
 - Focus on emotional well-being (with an emphasis on burnout): at the end of 2025 we delivered a remote seminar for all Baltics employees on the topic “Burnout: how to prevent it and cope with it”.
 - ERGO Baltics Cancer Prevention Month. The main goal of the project was to raise the awareness about possible cancer types, encourage healthy habits and support early detection. In 2025 the following activities have been implemented: Lithuania – a lecture about cancer prevention medical programs + blood tests in the offices to test the signs of ovarian and prostate cancer marks; Estonia – 2 health buses in the office (a mammography and skin cancer screening buses) + a colleague shared her personal story on fighting the breast cancer; Latvia – online training session + skin diagnostics with dermatoscope + mobile mammography car at the office.
 - Renewed health insurance package: rehabilitation after hospitalization and telemedicine services added.
 - Mentoring programs:
 - New joiners’ program (LT; LV; EE): to support a newcomer at the beginning of his/her career at ERGO and help him/her feel welcome.
 - Career mentoring program (LT): a voluntary initiative for ambitious colleagues seeking to acquire practical business knowledge, improve their personal qualities and skills during a continuous cooperation (3 months) with a selected mentor.
- **2. A culture encouraging “have your say!” approach:** ERGO Baltics DEI Council. Elected in 2024 July the committee aspires to represent everyone’s voice and opinion. The council is composed of 15 members of different age, gender, functions and seniority levels. Council members gather once per two months to discuss how to make ERGO a great place to work at for absolutely everyone. Since its' establishment, DEI Council has identified 4 main DEI target groups in the Baltics: generational diversity, gender, LGBTQ+ and disability. Until the end of 2025 two target groups have been covered during Council meetings: generational diversity and LGBTQ+:

- Generational diversity. Council members brainstormed 27 ideas how to include and represent different age groups in the Baltics. TOP10 ideas were selected (by voting) as the most favorite ones which are now on the implementation phase.
- LGBTQ+. Council members brainstormed ideas representing three main categories: building an inclusive work environment; external engagement and visibility; trainings. TOP 7 ideas have been selected (by voting) and are yet to be implemented. Several examples of TOP 7 ideas: visible support from company leaders; trainings for managers on inclusiveness; trainings for employees about DEI and Baltics DEI target groups; community-building events reflecting DEI.

ERGO ambassador program. An opportunity for anyone aspiring to grow, gain new skills and tell the whole LinkedIn audience about themselves and their professional experience at ERGO. There are 15 ambassadors at ERGO Baltics. This is our way to involve ERGO community and let everyone's voice to be heard.

(virtual reality room)

- An internal campaign "Idea Box" (LT). The main goal – encourage employees to have their say by offering ideas how to improve ERGO culture. One idea was implemented every quarter. In total four ideas were implemented in 2024: organized blood donation; created ERGO Wardrobe; established a massage room (a message chair); created VR

- **3. Initiatives/projects reflecting and focusing on different DEI target groups:** Unconscious bias trainings for leaders (in 2022). The main goal was to increase leaders' awareness of unconscious prejudices, stereotypes and biases in employee-related processes. It is crucial since awareness is the first step to overcome them.

- Neurodiversity trainings (in 2024). Knowing that invisible disabilities are way more common than the physical ones, however, surrounded by many stigmas, we sought to develop the ability of our employees to recognize them. We talked about what neurodiversity is and what forms it takes; what are the most common myths about neurodiverse people; what challenges neurodiverse people face at work and in their personal lives, and most importantly – how to behave in a friendly and supportive way from our side.
- “DuoDay” (LT) and “Different shoes day” (LV) initiatives. A bit different form of job shadowing focusing on integration of disabled people. In 2025 Lithuania welcomed two new colleagues: a person with a visual impairment shadowed Communications Department, while a colleague with a mobility impairment visited the Corporate Customers Department. Latvia did not participate in this initiative in 2025, however, in 2024 there were 11 visitors in 8 departments.

- Initiative “ERGO tėveliai” (ERGO parents), created in 2022 and continued further on (LT). The purpose of this project is to create a positive experience and accompany ERGO employees before/during/after childcare leave.

4. Initiatives to celebrate our people:

- Celebrating career milestones at ERGO. We do celebrate and reward our people based on the duration of their work at ERGO – 10, 15, 20, 25, 30 years. In the Baltics we rewarded 94 colleagues in total (ERGO Insurance SE and ERGO Life combined). Distribution by countries is as follows: LT (55 colleagues in total): 10 years – 25 colleagues; 15 years – 12 colleagues; 20 years – 11 colleagues; 25 years – 4 colleagues; 30 years – 3 colleagues.
- LV (22 colleagues in total): 10 years – 10 colleagues; 15 years – 3 colleagues; 20 years – 4 colleagues; 25 years – 5 colleagues; 30 years – 0 colleague.
- EE (17 colleagues in total): 10 years – 8 colleagues; 15 years – 4 colleagues; 20 years – 1 colleague; 25 years – 1 colleague; 30 years – 3 colleagues.

Starting from 2025, in addition to the main gift, long-term employees in Lithuania have been awarded with personalized certificates confirming that trees will be planted under their name.

Since for a few years in a row we have been rewarded as a family friendly employer, it is crucial for us to justify that name by making sure our community has no difficulties in managing work/life balance. To do that we continue working under an innovative solution (“3+2 model”: 3 days of work at the office, 2 days – at home) so that our employees do not have to choose between family/pets and the office. Also, people can take up to 28 calendar days of workation per year in European Union countries – in 2025, 69 colleagues (from both ERGO Insurance SE and ERGO Life SE) used the workation solution. Distribution by countries is below:

- Latvia: 8 cases (1 employee fully working in PNC; 7 - working on both sides (PNC and Life))
- Estonia: 35 cases (2 employees fully working in Life; 33 - working on both sides (PNC and Life)).
- Lithuania: 26 cases (16 employees working in PNC; 10 employees – in Life).

These are just a few examples indicating how we are ensuring inclusion. It should be noted that in ERGO, employees are also involved daily through the activities of line managers as well as through the intranet, the in-house magazine, organic communication in modern offices and joint activities.

Shared events and joint activities are very important for our employee experience. Employee summer events were held in all Baltic countries. In winter and early spring events we hosted celebrations where the best colleagues, teams and projects were awarded. There were also several events for our children, special team building actions and celebrations. Also, we are participating in the student fairs to introduce ERGO to young people, talk about various career opportunities at ERGO, and be visible among young people.

Diversity / Main HR Statistics

ERGO HR & Diversity statistics 2025

Total number of staff	567

	Female:	41
Average tenure (years)	6,6	
Training hours per employee	48	
Employees on maternity leave	10	

Environmental responsibility

“Protecting the future is in our nature” – with this statement we dedicate ourselves for creating a better tomorrow and especially environment – making an effort to ensure minimal impact on our ecological footprint and to make positive contributions towards meeting the requirements set out in the Paris Agreement.

As a financial services provider, our direct impact on the environment is limited since our business model is not energy-or resource-intensive. We become involved in areas where we can have a tangible and beneficial influence and make every effort to keep energy and resource consumption, and carbon emissions, as low as possible.

We raise awareness of environmentally friendly behaviour among our employees and customers alike. We are committed to moving our business operations across the Group to reach climate friendly results in accordance with set Group Ambition 2025 plan.

We will achieve this by focusing on three main activity areas – direct climate related impacts of greenhouse gas emissions from our own operations and indirect impact from our activities in investments and (re)insurance products.

The main factors driving our emissions – energy consumption, resource consumption and business travel. We calculate our carbon emissions from energy, paper and water consumption, business trips and waste generation on an annual basis. In this way, we determine our ecological footprint in accordance with internationally recognised methods and conversion factors, such as the GHG protocol.

Each individual employee is asked to help to reduce the consumption of resources within the company and at home offices. We continuously encourage our employees to reduce use of paper, private and company transport, and increase level of waste sorting for improved recycling purposes.

We continue our improvement activities and raise awareness about digital waste and encourage people to delete data that is no longer required, with the aim of sensitising employees to the fact that data storage uses electricity and creates carbon emissions. All three Baltic countries always are active participants in annual ERGO Group initiative – Data deletion challenge which helps to reduce greenhouse gas emissions.

Caring for the environment begins with awareness and small actions, and to ensure that no hazards go unnoticed, ERGO continued use an environmental register through which all employees can report environmental risks they have noticed.

In 2025 ERGO Estonia continued cooperation with company GreenDice, startup which offers to various society groups companies used ICT devices, by this extending life cycle of ICT equipment and supporting various social groups which due to various reasons do not have possibility to purchase and work with high level ICT devices.

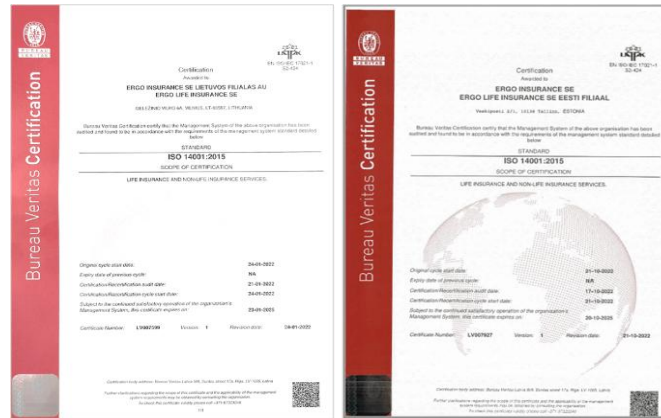

In 2025 we continued our participation as a member of Green Tiger, a collaborative platform that aims to devise, teach and implement a plan for a balanced economy. With a help of collaboration process want to improve our climate journey even more carefully and involve employees more directly in environmental issues as well as make sure that the insurance sector as a whole takes a more sustainable direction – by engaging in prevention work and reducing the footprint of insurance, which is primarily due to claims handling.

ERGO each year joins the Earth Hour initiative together with other Group offices and completely switched off the lights in ERGO Baltic countries headquarters for one hour. ERGO Estonia headquarters is in one of the most environmentally sustainable office buildings in the Baltic States, where all lighting solutions are automated. Thus, we supported Earth Hour in Estonia by sharing the call to action to promote saving energy.

Environmental Management

Our parent companies, Munich Re and ERGO Group, have announced their Strategy Ambition 2025 Shape – Scale – Succeed, which includes the Climate Ambition 2025. The main goal of this initiative is to reduce current CO2 emissions by 12% per employee by 2025. ERGO Baltic has also committed to this goal and wants to be part of the international initiative to take action to reduce carbon emissions in our organization.

To achieve this, we are measuring our 'carbon footprint', monitoring it, and looking for ways to reduce CO2 emissions. Our Management Board has approved and regularly reviews operations of the Environmental Management System, related policies and performance KPI's. The Environmental Management team within its daily operations monitor resource usage by tracking and converting our water, electricity, heating, waste, and travel data into CO2 emissions, developing action plans to reduce CO2 emissions, identifying and monitoring environmental risks within our organization, and educating all employees on how to consider environmental aspects in their daily activities.

During 2025, ERGO Baltics successfully passed ISO14001:2015 surveillance or recertification audits in all three countries, ISO14064:2018 surveillance audit in Latvia which confirm the companies' significant achievements and responsibilities in the environmental and sustainability fields.

ISO 14001:2015 specifies the requirements for an environmental management system that an organization can use to enhance its environmental performance. It is intended for use by an organization seeking to manage its environmental responsibilities in a systematic manner that contributes to the environmental pillar of sustainability. ISO 14001:2015 helps an organization achieve the intended outcomes of its environmental management system, which provide value for the environment, the organization itself, and interested parties. Consistent with the organization's environmental policy, the intended outcomes of an environmental management system include enhancement of environmental performance, fulfilment of compliance obligations, and achievement of environmental objectives.

The ISO 14064 standard is part of the ISO 14000 series of International Standards for environmental management. The ISO 14064 standard provides governments, businesses, regions, and other organizations with a complementary set of tools for programs to quantify, monitor, report, and verify greenhouse gas emissions. The ISO 14064 standard supports organizations to participate in both regulated and voluntary programs such as emissions trading schemes and public reporting using a globally recognized standard. ISO 14064-1:2018 specifies principles and requirements at the organization level for quantification and reporting of greenhouse gas (GHG) emissions and removals. It includes requirements for the design, development, management, reporting, and verification of an organization's GHG inventory.

Main activities and actions

Marketing, communication, brand image

The marketing team focused on empowering sales, while communications highlighted the value of insurance and preventive measures. Using our expertise, statistics, and risk perspective, we demonstrated our mission to contribute to a safer environment.

Sales support & service

During 2025 several Life insurance promoting campaigns have been organized in Latvia and Lithuania.

In Lithuania we have created and launched a new **digital life insurance solution**. This solution provides an opportunity to conveniently choose and purchase one of three insurance options online and set a monthly or annual premium.

The entire process – from application submission, risk assessment to payment – takes place online, and after just two days the client receives a policy confirming the conclusion of the contract. To date, **this is the only such extensive online life insurance package on the Lithuanian market**, covering as many as four protections: life insurance, 39 critical illness insurance, total disability and accident insurance.

September 2025 a new internal initiative was launched for all ERGO Lithuania employees, **inviting them to share contacts regarding life and health insurance services**.

We asked our people to share the contacts of people they care about and help them find a reliable life and health insurance partner. The care they share comes back – for each contract made with ERGO, people are getting paid.

In Latvia, a life insurance with savings campaign titled “**Support that Turns into Opportunities**” was launched to encourage contact collection and increase sales of ERGO Savings with life insurance. The campaign included a promotional lottery to boost engagement. Participants had the opportunity to win a family vacation or a €300 gift card for Tervise Paradiis in Estonia, reinforcing the campaign’s appeal and supporting its sales and lead-generation objectives.

Statement of the management's responsibility

The Board of ERGO Life Insurance SE confirms that the separate financial statements for the year ended 31 December 2025 are prepared in accordance with the International Financial Reporting Standards as adopted by the EU, and that appropriate accounting policies have been applied on a consistent basis. The Board of ERGO Life Insurance SE is responsible for preparing these separate financial statements from the books of primary entry. The Board confirms that these separate financial statements for the year ended 31 December 2025 present fairly the financial position at the end of the reporting year, and the results of its operations and cash flows for the reporting year.

Prudent and reasonable judgements and estimates have been made by the Board in the preparation of the separate financial statements for the year ended 31 December 2025.

The Board of ERGO Life Insurance SE is responsible for the maintenance of proper accounting records, the safeguarding of the Company's assets and the prevention and detection of fraud and other irregularities in the Company. The members of the Board are also responsible for operating the Company in compliance with the legislation of the Republic of Lithuania.

Ursula Clara Deschka
Chairwoman of the Management Board

15 April 2026

¹ The Company also recorded low-value or short-term lease payments under this caption in the amount of EUR 27,569 as at 31 December 2025 (EUR 16,489 as at 31 December 2024).

The accompanying notes are an integral part of these financial statements.

Notes to the separate financial statements

Note 1. Reporting entity

ERGO Life Insurance SE (hereinafter “the Company”) is a life insurance company incorporated and domiciled in Lithuania. The Company’s legal address is Geležinio Vilko St. 6A, Vilnius.

The Company is engaged in life insurance and health and accident insurance business.

The separate financial statements of ERGO Life Insurance SE for 2025 include the financial data of ERGO Life Insurance SE’s head office in Lithuania and the financial information of its Latvian and Estonian branches.

These separate financial statements were authorised for issue by the management board on 15 April 2026. Under the Law on Companies of the Republic of Lithuania, the annual report and the financial statements that have been prepared by the management board and approved by the supervisory board must also be approved by the shareholders’ general meeting. Shareholders may decide not to approve the financial statements and may demand that a new set of financial statements be prepared.

Note 2. Basis of preparation

The principal accounting policies applied in the preparation of these separate financial statements are set out below. Consistent accounting principles have been applied to the financial years presented in these separate financial statements.

These financial statements are separate financial statements of the Company. Consolidated financial statements are not prepared as the exemption criteria in IFRS 10.4(a) for preparation of consolidated financial statements is met. The translated consolidated financial statements of the ultimate parent Münchener Rückversicherungs-Gesellschaft AG (code – HRB 42039, address – Königinstr. 107, 80802 München, Germany) are published on the local website www.ergo.lt. The Company also meets consolidation exemption criteria set out in Article 6 of the Law on Consolidated Financial Reporting by Groups of undertakings of the Republic of Lithuania.

Going concern

The Management Board has considered the Company’s financial position and sources of liquidity along with the various risks and uncertainties involved in operating a business, including global economic conditions caused by the geopolitical situation, as part of its assessment of the Company’s ability to continue as a going concern.

Based on the assessment above, when approving the financial statements, the Board reasonably expected that the Company has adequate resources to continue in operational existence for the foreseeable future. As a result, the Board agrees that the Company continues to adopt the going concern basis of accounting in preparing the financial statements.

(a) Basis of accounting

The separate financial statements of ERGO Life Insurance SE have been prepared in accordance with the International Financial Reporting Standards issued by the International Accounting Standards Board (IASB) and their interpretations as adopted by the European Union (IFRS EU) to be effective for the year 2025.

(b) Functional and presentation currency

These separate financial statements are presented in euro (unless otherwise stated), which is the Company's functional currency.

(c) Basis of measurement

The separate financial statements are prepared on the historical cost basis except for the financial assets measured at fair value through profit or loss, financial assets at fair value through other comprehensive income and unit-linked and investment contract liabilities, measured at fair value.

(d) Use of judgements and estimates

In preparing these separate financial statements, the management made judgements, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets, liabilities, income, and expenses.

The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making judgements about the net carrying values of assets and liabilities that are not readily apparent from other sources. Although the estimates are based on management's best judgement and facts, actual results may differ from those estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the year in which the estimate is revised if the revision affects only that year, or in the year of the revision and future years, if the revision affects both the year of revision and future years.

Key sources of uncertainty estimates in the separate financial statements are related to insurance contract liabilities. The Company employs a responsible actuary. Estimation and recognition of insurance contract liabilities are described in policies (k).

Estimates are also used in determining fair value of financial assets (see part (h)), impairment (see part (i)) and deferred tax assets (see part (o)).

Information about the main estimation criteria that affect the amounts recognised in the separate financial statements is presented in the following notes:

- Note 12. Investments in financial instruments
- Note 14. Insurance and reinsurance contracts
- Note 15. Other receivables
- Note 24. Income tax

The risks and estimation uncertainties related to insurance contracts and financial instruments are described in Note 3.

(e) Geopolitical risk

ERGO Life Insurance SE, including the branches (hereinafter ERGO or the Company), monitors the geopolitical situation in Eastern Europe and carefully assesses all circumstances that could impact the Company's activities and risk profile, including operational and cyber risks. We have carried out several analyses of the potential impact of the conflict situation on the Company's business.

Underwriting risk

ERGO does not run direct business in the conflict area (Russia, Ukraine, and Belarus). However, the Company carefully reviewed the insurance products it sells and implemented additional preventive measures (i.e. set underwriting limitations) to reduce the further possible risk exposure in Ukraine, Russia, and Belarus.

Operational risks

The most significant operational risks derive from sanction management and information and cyber security.

Sanction risks in ERGO are generally managed and grouped into two major categories: targeted and sectoral sanctions. Targeted sanctions are fully covered by an automated screening tool implemented in the Company as part of the Internal Control System. All insured parties and persons participating in the contract (natural or legal persons) who obtain direct or indirect insurance coverage are screened against the sanction lists using this tool. Sectoral sanctions are managed through both: an automated screening tool and manual control, performed to all insurance products to which sanctions could possibly apply.

ERGO Life Insurance SE, being a part of ERGO Group, takes the information and cyber security very seriously. The Company has implemented an information security management system in line with the best international practices (ISO27001). Additionally, there is a cyber security maturity program where ERGO is expected to be on a specific level of cyber security. Such initiatives create the background to be properly prepared for cyber risks. Security trends are closely monitored, to raise employees' awareness of potential cyber-attacks, special communication to all employees was performed. In addition to the above, at the end of December 2023 – beginning of 2024, ERGO carried out a supplementary evaluation of cyber security measures in place and set additional prevention measures to be implemented.

Market risks

The most important risk related to financial assets is a decrease in the value of the investment portfolio, caused by the volatility of market prices.

Exposure to fluctuations in market value is assessed on an ongoing basis using four models. The first, Net Loss Limit (NLL), monitors the probability of achieving a result that surpasses the minimum investment result set by actuaries. The second, Credit Value at Risk (CVaR) measures the potential loss that a portfolio of assets exposed to credit risk could suffer due to a weakening of the issuer's credit rating. The third, Market Value at Risk (MVaR), measures the potential decrease in the value of the current investment portfolio for one year. The fourth, Investment Asset/Liability Mismatch (InvALM) combines two of the above models (CVaR and MVaR) and the company's liabilities side and views how market events could influence the company when the risks taken on the asset side exceed the risk-neutral position resulting from liabilities. Clearly defined processes ensure that the company can respond timely to any significant capital market developments.

(f) Measurement of fair value

A number of the Company's accounting policies and disclosures require the measurement of fair values, for both financial and non-financial assets and liabilities.

The Company has an established control framework with respect to the measurement of fair values. This includes a valuation team that has overall responsibility for overseeing all significant fair value measurements, including Level 3 fair values, and reports directly to the chief financial officer. The valuation team regularly reviews significant unobservable inputs and valuation adjustments. If third party information, such as broker quotes or pricing services, is used to measure fair values, then the valuation team assesses the evidence obtained from the third parties to support the conclusion that these valuations meet the

requirements of IFRS EU, including the level in the fair value hierarchy in which the valuations should be classified.

When measuring the fair value of an asset or a liability, the Company uses observable market data as far as possible. Fair values are categorised into different levels in a fair value hierarchy based on the inputs used in the valuation techniques as follows.

–Level 1: quoted prices (unadjusted) in active markets for identical assets or liabilities;

–Level 2: inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices);

–Level 3: inputs for the asset or liability that are not based on observable market data (unobservable inputs).

If the inputs used to measure the fair value of an asset or a liability might be categorised in different levels of the fair value hierarchy, the fair value measurement is categorised in its entirety in the same level of the fair value hierarchy as the lowest level input that is significant to the entire measurement.

The Company recognises transfers between levels of the fair value hierarchy at the end of the reporting period during which the change has occurred.

Note 3. Material accounting policies

The accounting policies set out below have been applied consistently to all periods presented in these separate financial statements.

(a) Classification of insurance contracts

Classification as an insurance contract

A contract is classified as an insurance contract within the scope of IFRS 17 if it transfers significant insurance risk. The risk is significant if, and only if, there is at least one scenario where the insured event could cause the issuer to pay additional amounts that are significant compared to payments under any other scenario.

We make this assessment as part of risk transfer testing. We classify an insurance risk as significant if an insured event could cause the payment of additional amounts that are significant in any single scenario, excluding scenarios that have no commercial substance, and there is a possibility of a loss on a present-value basis. Alternatively, we classify contracts as insurance contracts if they transfer to the reinsurer substantially all the insurance risk relating to the reinsured portions of the underlying insurance contracts. Contracts that do not transfer significant insurance risk are generally financial instruments and are accounted for in accordance with IFRS 9 requirements. An exception here are investment contracts with discretionary participation features, which fall under the scope of IFRS 17.

Separation of components

Insurance contracts can contain one or more of the following components:

- embedded derivatives;
- investment components;
- non-insurance services.

If an insurance contract contains embedded derivatives that are themselves not contracts within the scope of IFRS 17, IFRS 9 requirements are applied when assessing the obligation to separate components and accounting for the given derivative. The company has not identified any significant embedded derivatives components to date.

Distinct investment components and distinct non-insurance services are separated from the insurance contract and accounted for in accordance with IFRS 9 and/or IFRS 15 requirements.

Level of aggregation

Recognition and measurement occur at the level of groups of insurance contracts. We begin by including insurance contracts in a portfolio that are subject to similar risks and managed together. In a second step, we assign each portfolio – based on its profitability – to one of the following three groups of insurance contracts:

- group of contracts that are onerous at initial recognition;
- group of contracts that at initial recognition have no significant possibility of becoming onerous subsequently; and
- group of the remaining contracts in the portfolio.

We classify an insurance contract as onerous at initial recognition if the risk-adjusted present value of all the expected cash flows for contract fulfilment results in a net cash outflow. Due to changes in estimates relating to future service, a group of insurance contracts can become onerous upon subsequent measurement. This nevertheless does not affect the classification into different groups at initial recognition. In other words, the composition of the groups is not reassessed.

We also ensure that all the contracts within a group were issued within one year. We thus do not use the annual cohort exemption.

(b) Lease accounting

At inception of a contract, the Company assesses whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. To assess whether a contract conveys the right to control the use of an identified asset, the Company uses the definition of a lease in IFRS 16. This policy is applied to contracts entered into, on or after 1 January 2019.

(i) The Company as a lessee

At commencement or on modification of a contract that contains a lease component, the Company allocates the consideration in the contract to each lease component on the basis of its relative stand-alone prices. However, for the leases of property the Company has elected not to separate non-lease components and account for the lease and non-lease components as a single lease component.

The Company recognises a right-of-use assets and a lease liability at the lease commencement date. The right-of-use asset is initially measured at cost, which comprises the initial amount of the lease liability adjusted for any payments made at or before the commencement date, plus any initial direct costs incurred and an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located to the condition required by the terms and conditions of the lease, less any lease incentives received.

The right-of use asset is subsequently depreciated using the straight-line method from the commencement date to the end of the lease term, unless the lease transfers ownership of the underlying asset to the Company by the end of the lease term or the cost of the right-of-use asset reflects that the Company will exercise a purchase option. In that case the right-of-use asset will be depreciated over the useful life of the underlying asset, which is determined on the same basis as those of property, plant, and equipment. In addition, the right-of-use asset is periodically reduced by impairment losses, if any, and adjusted for certain remeasurements of the lease liability.

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, the Company's incremental borrowing rate. Generally, the Company uses its incremental borrowing rate as the discount rate.

The Company determines its incremental borrowing rate by obtaining interest rates from various external financing sources and makes certain adjustments to reflect the terms of the lease and type of the asset leased.

Lease payments included in the measurement of the lease liability comprise the following:

- fixed lease payments, including in-substance fixed lease payments;
- variable lease payments that depend on an index or a rate, initially measured using the index or rate as at the commencement date;
- amounts expected to be payable under a residual value guarantee; and
- the exercise price under a purchase option that the Company is reasonably certain to exercise, lease payments in an optional renewal period if the Company is reasonably certain to exercise an extension option, and penalties for early termination of a lease unless the Company is reasonably certain not to terminate early.

The lease liability is measured at amortised cost using the effective interest method. It is remeasured when there is a change in future lease payments arising from a change in an index or rate, if there is a change in the Company's estimate of the amount expected to be payable under a residual value guarantee, if the Company changes its assessment of whether it will exercise a purchase, extension, or termination option or if there is a revised in-substance fixed lease payment.

When the lease liability is remeasured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The Company presents right-of-use assets that do not meet the definition of investment property in "property, plant and equipment" and lease liabilities in "lease-related liabilities" in the statement of financial position.

Short-term leases and leases of low-value assets

The Company has elected not to recognise right-of-use assets and lease liabilities for leases of low-value assets and short-term leases, including IT equipment. The Company recognises the lease payments associated with these leases as an expense on a straight-line basis over the lease term.

(c) Property, plant, and equipment

(i) Recognition and measurement

Items of property, plant, and equipment are recognised as assets when it is probable that the future economic benefits that are attributable to the asset will flow to the entity and the cost of the asset can be measured reliably. This recognition principle is applied to all property, plant, and equipment costs at the time they are incurred. These costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it.

Items of property and equipment are measured at cost, which includes capitalised borrowing costs, less accumulated depreciation, and any accumulated impairment losses.

Any gain or loss on disposal of an item of property and equipment is recognised in profit or loss.

(ii) Subsequent expenditure

Subsequent expenditure is capitalised only if it is probable that the future economic benefits associated with the expenditure will flow to the Company.

(iii) Depreciation

Depreciation is calculated to write off the cost of items of property and equipment less their estimated residual values using the straight-line method over their estimated useful lives and is generally recognised in profit or loss. Land is not depreciated.

The estimated useful lives for current and comparative periods are as follows:

Computer equipment	4 years
Cars, office, and communications equipment	6 years
Furniture	6 years
Buildings	50 years

As of 1 August 2025, depreciation rates were revised across all three Baltic countries as follows: for computer equipment to 4 years (2024: 3–5 years), for cars, office, and communications equipment to 6 years (2024: 5 years), and for furniture to 6 years (2024: 6–7). Depreciation is charged on the difference between cost and residual value. If residual value cannot be estimated reliably or is insignificant, it is presumed to be equal to zero. Depreciation methods, useful lives and residual values are reviewed at each reporting date and adjusted if appropriate.

(d) Intangible assets

(i) Recognition and measurement

Items of intangible assets are recognised if, and only if, it is probable that the future economic benefits that are attributable to the asset will flow to the entity and the cost of the asset can be measured reliably. Other intangible assets that are acquired by the Company and have finite useful lives are measured at cost less accumulated amortisation and any accumulated impairment losses. Intangible assets comprise acquired software and licences.

(ii) Subsequent expenditure

Subsequent expenditure is capitalised only when it increases the future economic benefits embodied in the specific asset to which it relates. All other expenditure, including expenditure on internally generated goodwill and brands, is recognised in profit or loss as incurred.

(iii) Amortisation

Amortisation is calculated to write off the cost of intangible assets less their estimated residual values using the straight-line method over their estimated useful lives and is generally recognised in profit or loss.

The estimated useful live for current and comparative periods is as follows:

Software	8 years
----------	---------

As of 1 August 2025, the useful life of software was standardized to 8 years across all three Baltic countries (2024: 3–12 years). Intangible assets are amortised on the assumption that their residual value is zero. Internally generated goodwill and the costs attributable to the development of brands are recognised as an expense as incurred. Amortisation methods, useful lives and residual values are reviewed at each reporting date and adjusted if appropriate.

(e) Cash and cash equivalents

Cash and cash equivalents in the separate statement of financial position comprise cash on hand, demand deposits and overnight deposits. In the separate statement of cash flows, cash flows are presented using the direct method.

(f) Investment in subsidiaries and associates

Investments in subsidiaries and associated companies are accounted for at cost less impairment.

(g) Assets held-for-sale

Non-current assets, or disposal groups comprising assets and liabilities, are classified as held-for-sale if it is highly probable that they will be recovered primarily through sale rather than through continuing use.

Such non-current assets and disposal groups classified as held for sale are generally measured at the lower of their carrying value and fair value less costs to sell. Any impairment loss on a disposal group is allocated first to goodwill, and then to the remaining assets and liabilities on a pro rata basis, except that no loss is allocated to inventories, financial assets, deferred tax assets, employee benefit assets, investment property and biological assets, which continue to be measured in accordance with accounting policies. Impairment losses on initial classification as held-for-sale or held-for-distribution and subsequent losses on remeasurement are recognised in profit or loss. Impairment losses on available-for-sale assets measured at initial recognition, and subsequent gains and losses on revaluation of the assets are included in profit or loss.

Once classified as held-for-sale, intangible assets and property, plant and equipment are no longer amortised/depreciated.

(h) Financial instruments

Financial assets comprise investments in equity and debt instruments, trade and other receivables, cash and cash equivalents, loans provided and derivative financial instruments.

Recognition and derecognition

We recognise a financial asset in the statement of financial position at the time when we become a party to the contractual provisions of the financial instrument.

When the contractual rights to receive the cash flows from a financial asset have expired, we derecognise that asset. If a financial asset is transferred, we evaluate whether the derecognition requirements of IFRS 9 are met. In this process, we consider the extent to which we retain the risks and rewards of ownership of the financial asset and – if applicable – whether we retain control. Depending on the outcome of this evaluation, we derecognise the financial asset, or we continue to recognise it in full or to the extent of our continuing involvement.

Classification

For subsequent measurement, financial assets are classified as measured at “amortised cost”, fair value through other comprehensive income” or “fair value through profit or loss”.

The classification is determined based on the business model for managing the financial assets and the contractual cash flow characteristics of the financial assets.

Business model

An entity’s business model refers to how the entity manages the financial assets to generate cash flows. The business model is determined by management at the level of groups of financial assets; it is based on several factors, such as the risks that affect the performance of the business model and the way in which those risks are managed as well as how the performance is evaluated and reported to management. A distinction is made between the following business models:

In the business model “hold to collect”, the financial assets are held with the objective to collect contractual cash flows. The sale of financial assets is not part of the management strategy, but is, under certain circumstances, not incompatible with the application of this business model, for example if there is an increase in the financial asset's credit risk.

The objective of the business model “hold to collect and sell” is achieved by both collecting contractual cash flows and selling financial assets. The sale of assets is a key aspect of the management of the portfolio.

The business model “other” applies to financial assets that are managed neither under the “hold to collect” nor under the “hold to collect and sell” business models. This is the case, for example, if the objective of the business model is to realise cash flows by selling assets, or if a group of financial assets is managed on the basis of their fair value.

Contractual cash flow characteristics

If financial assets are held within the business model “hold to collect” or “hold to collect and sell”, an additional assessment as to whether they pass the “solely payments of principal and interest (SPPI) test” is necessary for the classification for subsequent measurement.

Contractual cash flows that are solely payments of principal and interest on the principal amount outstanding are consistent with a basic lending arrangement and pass the SPPI test. In a basic lending arrangement, compensation for the time value of money and for the credit risk are typically the most significant elements of interest. In addition, interest may include compensation for other basic lending risks (such as liquidity risk) and costs (such as administration costs) as well as an appropriate profit margin consistent with a basic lending arrangement.

Measurement

Measurement on initial recognition

On initial recognition at the trade date, financial assets are recognised at the transaction price or fair value. For financial assets that are not subsequently measured at fair value through profit or loss, directly attributable transaction costs must be included in addition.

Subsequent measurement

The measurement of a financial asset after initial recognition is based on the classification in accordance with the business model and the result of the SPPI test.

Financial assets managed within the business model “hold to collect” that pass the SPPI test are measured at amortised cost. This includes also financial receivables and cash and cash equivalents.

Financial assets subject to the business model “hold to collect and sell” that pass the SPPI test are measured at fair value through other comprehensive income. This includes a major part of our financial investments. They are mostly used to back insurance liabilities and are managed as part of our asset-liability management on the basis of their duration and risk profile. This means that the management strategy is aimed at both collecting contractual cash flows and selling financial assets.

Financial assets that are managed under the business model “other” or that do not pass the SPPI test are measured at fair value through profit or loss. In view of the business model this includes in particular the investments for unit-linked life insurance and the insurance-related financial instruments – such as insurance contracts that do not transfer significant insurance risk.

Derivatives and equity instruments are generally measured at fair value through profit or loss. The Company does not make use of the option to designate equity instruments as measured at fair value through other comprehensive income.

In addition, financial assets may be irrevocably designated as measured at fair value through profit or loss on initial recognition if this eliminates or significantly reduces accounting mismatches.

(i) Impairment

(i) Financial assets

IFRS 9 sets out an expected credit loss model for recognising loss allowances, under which expected credit losses are anticipated before they arise and must be recognised as an expense. These impairment requirements primarily affect financial assets measured at amortised cost or at fair value through other comprehensive income, as well as lease receivables. A three-stage impairment model is used to recognise and measure impairment losses on financial assets.

Stage 1: On initial recognition, financial instruments are always assigned to Stage 1 of the impairment model, and they remain at Stage 1 if their credit risk has not increased significantly since they were initially recognised. The loss allowance is measured at an amount equal to the 12-month expected credit losses, which represents the expected credit losses that result from default events that may occur within 12 months of the reporting date.

Stage 2: If the credit risk of a financial instrument has increased significantly since initial recognition but there is no objective evidence of impairment, the loss allowance at Stage 2 of the impairment model is measured at an amount equal to the lifetime expected credit loss.

Stage 3: If in addition to a significant increase in credit risk, there is objective evidence of impairment, the instrument is allocated to Stage 3 of the impairment model (credit-impaired financial assets). As in Stage 2, the loss allowance is measured at an amount equal to the lifetime expected credit losses. Interest revenue is calculated by applying the effective interest method – unlike in Stage 1 and Stage 2 – on the basis of the net carrying amount of the financial asset (i.e. after deducting the loss allowance).

As a matter of principle, a significant increase in credit risk is assumed if this risk (measured in terms of the probability of default) has increased by more than two percentage points since the financial instrument was initially recognised.

We assume that the credit risk of a financial instrument has not increased significantly if it has low credit risk as at the reporting date (low credit risk exception).

For financial instruments with an MEAG rating (Munich Re Group asset manager), we generally assume that changes in the risk of a default occurring over the next 12 months are a reasonable approximation of the changes in the lifetime risk of a default occurring. If there are indications that only an assessment based on the entire lifetime of the financial instrument is appropriate, such an assessment is made.

We generally make use of the rebuttable presumption that the credit risk has increased significantly since initial recognition if a contractual payment is more than 30 days past due unless we have evidence to the contrary.

Objective evidence of credit impairment includes but is not limited to:

- significant financial difficulty of the borrower;
- a breach of contract (such as a default or past due event);
- it is becoming probable that the borrower will enter bankruptcy or another financial reorganisation;
- the disappearance of an active market for the financial asset because of financial difficulties.

To measure expected credit losses, we use the probability of default, the loss given default and the exposure at default.

Expected credit losses are equal to the discounted product of these three components. The calculation includes probability-weighted scenarios that take account of reasonable and supportable information that is available without undue cost or effort as at the reporting date and incorporates past events, current conditions, and forecasts of future economic conditions.

Financial assets are written off if, based on a reasonable assessment, it must be assumed that these assets are not recoverable. Indicators for this include a debtor lacking sufficient assets to service their debts or failing to commit to a repayment schedule. Upon completion of insolvency proceedings against a debtor, the financial assets are likewise deemed to be no longer recoverable and are fully derecognised. Such write-offs do not have an impact on profit or loss since the amounts are reflected in the loss allowance and therefore have already been recognised previously through profit or loss.

Our investment guidelines do not provide for the acquisition of purchased or originated credit-impaired financial assets.

We do not exercise the option to measure loss allowances on lease receivables using the simplified approach, i.e. at an amount equal to lifetime expected credit losses.

(ii) Non-financial assets

At each reporting date, the Company reviews the carrying values of its non-financial assets (other than inventories and deferred tax assets) to determine whether there is any indication of impairment. If any such indication exists, the Company makes estimate of the recoverable amount of such asset. An impairment loss is recognised if the carrying value of an asset or its cash-generating unit exceeds its estimated recoverable amount. Impairment losses are recognised in profit or loss.

(j) Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date in the principal, or in its absence, the most advantageous market to which the Company has access at that date. The fair value of a liability reflects its non-performance risk.

A number of the Company's accounting policies and disclosures require the measurement of fair values, for both financial and non-financial assets and liabilities.

When one is available, the Company measures the fair value of an instrument using the quoted price in an active market for that instrument. A market is regarded as active if transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis.

If there is no quoted price in an active market, then the Company uses valuation techniques that maximise the use of relevant observable inputs and minimise the use of unobservable inputs. The chosen valuation technique incorporates all of the factors that market participants would consider in pricing a transaction.

If an asset or a liability measured at fair value has a bid price and an ask price, then the Company measures assets and long positions at a bid price and liabilities and short positions at an ask price.

The best evidence of the fair value of a financial instrument on initial recognition is normally the transaction price, i.e. the fair value of the consideration given or received. If the Company determines that the fair value on initial recognition differs from the transaction price and the fair value is evidenced neither by a quoted price in an active market for an identical asset or liability nor based on a valuation technique for which any

unobservable inputs are judged to be insignificant in relation to the measurement, then the financial instrument is initially measured at fair value, adjusted to defer the difference between the fair value on initial recognition and the transaction price. Subsequently, that difference is recognised in profit or loss on an appropriate basis over the life of the instrument but no later than when the valuation is wholly supported by observable market data, or the transaction is closed out.

Investments are classified into fair value levels as per classification policy of Munich Re on the Group level.

In the case of Level 1, valuation is based on quoted prices in active markets for identical financial assets which the Company can refer to at the statement of financial position date. The financial instruments allocated to this level mainly comprise listed equity funds, listed bond funds.

Assets allocated to Level 2 are valued using models based on observable market data. If the financial instrument concerned has a fixed contract period, the inputs used for valuation must be observable for the whole of this period. Moreover, we have allocated to this level such assets for which prices are provided by price quoters but for which there is no proof that these were based on actual market transactions. The financial instruments we have allocated to this level mainly comprise bearer bonds and unlisted bond funds.

For assets allocated to Level 3, valuation techniques are used that are also based on unobservable inputs – which influences valuation both immaterially and materially. The inputs used reflect the Company's assumptions regarding the factors which market players would consider in their pricing. To this end, we use the best available market information, supplemented with internal company data. The assets allocated to this level of the fair value hierarchy comprise property funds and infrastructure investment funds.

(k) Insurance contract assets and liabilities

Recognition of insurance contract

A group of insurance contracts issued is recognised from the earliest of the following:

- the beginning of the coverage period of the group of contracts;
- the date when the first payment from a policyholder in the group becomes due; or
- for a group of onerous contracts, when the group becomes onerous.

Measurement of insurance contract

IFRS 17 provides a consistent accounting model for all insurance contracts. The basic approach consists in applying the General Measurement Model (GMM), which we use for Term Life, riders, annuities and reinsurance portfolios calculations. In view of the GMM's high complexity, IFRS 17 provides the option of using – primarily for short-term contracts – a simplified measurement model known as the Premium Allocation Approach (PAA). We apply this simplified measurement approach for health insurance business. IFRS 17 also provides for a modified measurement model, the Variable Fee Approach (VFA), for certain participating primary insurance contracts. We apply the VFA for conventional life and unit-linked insurance. Please see below for more detailed explanations of the underlying concepts of these approaches.

The different models are used for the measurement of liability for remaining coverage based on the characteristics of the contracts. Please see below for more detailed explanations of the starting points for the valuation approaches.

General Measurement Model (GMM)

Procedure

The GMM is based on a building block approach that consists of four blocks. The expected future cash flows for contract fulfilment form the basis for measuring our assets and liabilities from insurance business (building block 1). Cash flows are discounted in order to reflect the time value of money and the financial

risks (building block 2). Comparing the present value of expected cash inflows against the present value of expected cash outflows results in the present value of the net cash flows relevant for the measurement. This present value is subjected to a risk adjustment to reflect the uncertainty arising from non-financial risk pertaining to the amount and the timing of cash flows (building block 3). For groups of insurance contracts classified as profitable at initial recognition, we recognise a contractual service margin which represents the unearned profit (building block 4). The latter is recognised over time as insurance contract services are provided over the coverage period.

By contrast, for groups of insurance contracts where the sum of the present value of future cash outflows and the risk adjustment for non-financial risk exceeds the present value of expected future cash inflows, a loss component that reflects the expected loss on initial recognition is recognised directly as an expense.

For subsequent measurement of the LRC (the Liability for Remaining Coverage), building blocks 1, 2 and 3 are remeasured using updated assumptions and inputs. The contractual service margin is adjusted to reflect changes in non-financial assumptions of future coverage and new business margins, among other things, and is amortised as insurance contract services are provided over time. The carrying amount of the LRC is – at the end of each reporting period – the sum of the present value of expected net outflows, the risk adjustment for non-financial risk and the contractual service margin.

Cash flows (building block 1)

The starting point for measuring groups of insurance contracts is based on a current estimate of all cash flows required to fulfil the contract within the contract boundary.

Cash flows that need to be considered include premium payments, expenses for claims and benefits, acquisition and administration costs, and loss adjustment expenses. The cash flows included in the measurement model reflect our current estimates and expectations regarding the fulfilment of our insurance obligations at each reporting date. We include in the cash flows an allocation of certain fixed and variable overheads that can be directly attributed to the fulfilment of insurance contracts.

Discounting (building block 2)

Under the GMM, future cash flows are discounted using current discount rates. Measurement thus considers the time value of money, so that cash flows expected to occur at different times are made comparable. In this context, we select discount rates that are as consistent as possible with the overall cash flow characteristics of the groups of insurance contracts and make use of observable market inputs wherever possible. Discount rates are determined using a bottom-up approach, with the Solvency II interest-rate curves published by the supervisory authority EIOPA (European Insurance and Occupational Pensions Authority) serving as the starting point for risk-free interest rates. We ensure that credit spreads have no effect on the discounting of the cash flows or the risk adjustment for non-financial risk. The discount rates we use do not take into consideration any type of default risk. But if relevant, an illiquidity premium may be added to the discount-rate curve to take account of the differences in liquidity between the insurance liabilities and the liquid reference instruments used in determining the risk-free interest rate. We do this for the relevant portfolios in life primary insurance business, in particular.

At each reporting date, the fulfilment cash flows for the LRC and LIC (the Liability for Incurred Claims) are remeasured using current discount rates.

Risk adjustment for non-financial risk (building block 3)

Cash flows arising from insurance contracts usually involve a high degree of uncertainty regarding the point in time an insured event occurs and the amount of a claim. In addition, there may be changes to the assumptions made about the insurance business as a result of changes in policyholder behaviour, e.g. related to exercising available options. To take this uncertainty into consideration, IFRS 17 provides for a third building block: an explicit risk adjustment for non-financial risk that represents compensation for bearing

the risk. The sum of the risk adjustment for non-financial risk and the present value of net cash flows represents the fulfilment cash flows specific to a party that are relevant for measurement.

The risk adjustment for non-financial risk is determined in accordance with our internal risk model, taking Group-wide risk diversification into account. We apply a cost-of-capital method for determining the risk adjustment for non-financial risk. More specifically, we apply a cost-of-capital rate of 6% to the amount of capital required as at each future reporting date on a going-concern basis, and we discount the result using the risk-free rates adjusted for illiquidity. The level of risk adjustment for non-financial risk used by Company corresponds to a confidence level of approximately 88% over a one-year period. Like the present value of the cash flows, the risk adjustment for non-financial risk is reviewed at each reporting date and updated to reflect the current conditions.

Contractual service margin (building block 4)

The contractual service margin represents the unearned profit at initial recognition that is spread over the coverage period as insurance contract services are provided. If at initial recognition the present value of expected inflows exceeds the present value of expected outflows plus the risk adjustment for non-financial risk, the expected profit from the insurance cover is initially recognised as a contractual service margin and considered when measuring the liability for remaining coverage. The initial recognition of profitable groups of insurance contracts thus does not affect profit or loss. If additional profitable contracts are added to a group of insurance contracts within an annual cohort over time, the expected profit from the new business is added to the contractual service margin at initial recognition. On subsequent measurement, the change in the contractual service margin is recognised in profit or loss in the statement of profit or loss as part of insurance revenue. The amount of the contractual service margin to be recognised in profit or loss for each period is determined by coverage units. These are used to determine the quantity of services provided for the in-force insurance contracts in the current reporting period in relation to the expected total insurance contract services provided over the whole of the coverage period. For all of our insurance business, we define the coverage units in such a way as to ensure that they reflect the services provided as accurately as possible. We generally use volume-based coverage units such as the sum insured or the capital at risk, which may be adjusted to reflect the specific characteristics of the (re)insurance business concerned.

By contrast, if we expect a loss at initial recognition, we identify a corresponding portion of the present value of the expected net cash flows plus the risk adjustment for non-financial risk as a loss component. We recognise the expected loss in the statement of profit or loss at initial recognition of the group of contracts, or as soon as we become aware that the group of insurance contracts is onerous. When aggregating contracts into groups, we ensure that onerous groups of insurance contracts are not combined with profitable groups. At subsequent measurement, our control procedures are also designed to identify at an early stage any groups of insurance contracts that are to be classified as onerous in terms of future coverage. A loss component will always reflect the expected loss from the insurance contract services still to be provided at a given point in time. We systematically amortise the loss component based on the remaining cash flows and the risk adjustment for non-financial risk until the end of the coverage period.

An initially profitable group of insurance contracts within an annual cohort may become onerous on subsequent measurement. In this case, a loss component has to be recognised. Conversely, a group of insurance contracts classified as onerous can become profitable on subsequent measurement, giving rise to a contractual service margin. At the end of the coverage period, both the loss component and the contractual service margin have been completely amortised in profit or loss.

Premium Allocation Approach (PAA)

Scope of application

We use the PAA for all groups of insurance contracts that meet the requirements for applying the simplified measurement model. This is always the case if the coverage period of such contracts is one year or less – or,

if the coverage period is longer, it can be reasonably expected that applying the simplified measurement model will produce a measurement of the LRC for the group that would not differ materially from the measurement that would result from applying the requirements of the GMM. The length of the coverage period is mainly determined by the concept of contract boundaries. We use the PAA for health insurance business.

Procedure

On initial recognition of a group of insurance contracts, we recognise an LRC, equal to the premiums received less acquisition costs paid. For business classified as profitable, neither the present value of the future net cash flows nor the risk adjustment for non-financial risk nor the contractual service margin is explicitly determined and recognised. If the coverage period of the contracts in the group is one year or less, any acquisition costs incurred may be recognised directly as an expense. We use this option for a substantial part of health insurance business.

If we are aware of any indications that contracts should be classified as onerous under the GMM, we compare the insurance liability determined under the PAA with the result of the measurement under the GMM. If the comparison shows that the carrying amount of the LRC (fulfilment cash flows) under the GMM exceeds the carrying amount determined under the PAA, we directly recognise the balance as an expense in the form of a loss component. To this end, we explicitly calculate the present value of the net cash flows and the risk adjustment for non-financial risk to facilitate a comparison with the GMM. Our onerosity testing is geared to identifying onerous contracts as soon as possible and ensures adequate reserving at all times.

For subsequent measurement of a profitable group of insurance contracts, the carrying amount of the LRC is updated as follows. First, the carrying amount is either increased with no impact on profit or loss by adding the further premium payments received or decreased by subtracting directly attributable acquisition costs paid – provided that we do not make use of the option to recognise the acquisition costs as an expense. The LRC is reduced by the amount of insurance revenue earned as insurance contract services are provided. We earn the insurance revenue by spreading the expected total premium for the coverage period within the contract boundaries over the accounting periods in a risk-commensurate manner. Again, for subsequent measurement of profitable groups of insurance contracts, the present value of the net cash flows, the risk adjustment for non-financial risk and the contractual service margin are not explicitly determined, so that the PAA provides for effective simplification. By contrast and consistent with the GMM, we explicitly determine risk-adjusted net outflows for onerous groups of insurance contracts and following the occurrence of an insured event.

Also, for the PAA, a distinction is made between the LRC and the LIC. Likewise, a risk adjustment for non-financial risk needs to be determined for the LIC when using the PAA.

Insurance contracts with direct participation features measured using the **Variable Fee Approach (VFA)**.

Scope of application

Under an insurance contract, the insurer may not only be liable to pay for a claim after the occurrence of an insured event but may also have to give policyholders a share in the profits.

Contracts with direct participation features are measured using the VFA, subject to certain criteria. Contracts fall within the VFA scope if they provide for policyholder participation in the performance of a reference value for the underlying items. Unit-linked life insurance is another case for application of the VFA.

Procedure

Because of the special characteristics of insurance contracts with direct participation features, we consider our share of the income from the underlying items to be a variable fee, which we recognise in accordance with the requirements of the VFA. This variable fee comprises our share of the fair value of the underlying items and is our compensation for administering and managing them.

While the initial measurement of participating contracts is the same as under the GMM, special rules apply under IFRS 17 for subsequent measurement. For example, we offset against the contractual service margin any and all effects that have an impact on the fair value of the underlying items and consequently on our variable fee.

The value of the underlying items is based on this profit participation and reflects the present value of both future payments and payments made in current and prior periods. We use the fair values of the net assets backing our liabilities, including the assets backing equity, to measure the fair value of the underlying items.

The fulfilment cash flows for life and health primary insurance business are determined on a market-consistent basis in line with the contractual options and guarantees, applying a risk-neutral measurement where risk-free interest rates only can be generated under the no-arbitrage principle. The actual returns generated from the underlying items are usually higher, and the company's share in any excess return over the risk-neutral measurement is included in the contractual service margin under the VFA. After the contractual service margin has been adjusted, it is recognised in profit or loss based on the expected provision of future services, which are spread proportionally by applying coverage units. For participating contracts, we consider that we provide not only insurance services, but also investment-related services in managing the assets backing our liabilities.

Another difference compared with the GMM relates to the option of recognising the effect of changes in financial inputs on the measurement either in the statement of profit or loss, or in other comprehensive income in equity. This effect is not explicitly captured when using the VFA. Instead, because of the special link to the asset side, the result of the underlying item recognised in profit or loss for the liability side is mirrored in the statement of profit or loss. A positive investment result is offset by corresponding finance expenses from insurance contracts issued. Changes in the fair value of assets that are part of the underlying items and do not have an impact on profit or loss are recognised as insurance finance income or expenses directly in other comprehensive income in equity. This value corresponds to the amounts recognised for the investments in other comprehensive income in equity.

Presentation in the financial statements

Reinsurance contracts held that are assets

The recognition and measurement of reinsurance contracts held generally follows the requirements for insurance contracts issued.

A group of reinsurance contracts held is recognised from the earlier of the following: the beginning of the coverage period of the group of contracts, or the date when an onerous group of underlying insurance contracts is recognised.

With respect to a group of reinsurance contracts held that provide proportionate coverage, the group is not recognised until the date on which any underlying insurance contract is recognised – if that date is later than the beginning of the coverage period of the group of reinsurance contracts held.

We apply the GMM for reinsurance contracts held in life and health business.

The estimates of future cash flows and their discounting are determined at the reporting date on the basis of current assumptions, which are in line with the assumptions we made for measuring the underlying insurance contracts issued. In addition, we adjust the expected cash flows so as to reflect the reinsurer's risk of non-performance. We determine the expected credit risk on the basis of our counterparty's rating. On account of the high credit ratings of our external reinsurance partners, any risk of non-performance does not have a significant impact on the measurement.

We determine the risk adjustment for non-financial risk of reinsurance contracts held as the proportion of the risks that is effectively transferred to the reinsurer, with the net risk capital after retrocession serving here as the basis. We ensure in this context the best possible consistency when determining the risk adjustment for non-financial risk as regards the underlying gross business.

In contrast to insurance contracts issued, the contractual service margin for reinsurance contracts held can be positive or negative. In the case of prospective reinsurance coverage, it is necessary upon purchasing reinsurance to defer both a net gain and a net cost over the coverage period. We offset against the contractual service margin any changes in the fulfilment cash flows, provided that the changes relate to future service. However, if the changes in estimates are attributable to changes that do not adjust the contractual service margin of the group of reinsured insurance contracts, we recognise their impact on the measurement of the reinsurance contract held in profit or loss. In this way, we achieve a consistent presentation of gross business and reinsurance contracts held. Changes in the fulfilment cash flows that result from changes in the reinsurer's non-performance risk do not adjust the net gain or net cost. We instead recognise any such changes in profit or loss. As part of subsequent measurement, the contractual service margin is spread out over the remaining coverage period on the basis of the coverage units.

In the case of retroactive reinsurance contracts held, which provide coverage against adverse development of claims after the occurrence of an insured event, we recognise the net cost of purchasing reinsurance as an expense in profit or loss. Conversely, an expected net gain is spread over the settlement period of the underlying contracts in a contractual service margin on the basis of coverage units.

If a loss is recognised for an onerous group of underlying insurance contracts, we set up a loss-recovery component. In proportion to the anticipated recoveries, we thus match the loss component of the underlying gross business recognised as an expense with a loss-recovery component recognised as income. As a consequence, effective reinsurance coverage is thus offset in the financial statements and only the effects of losses from the underlying gross business that are not covered by reinsurance are recognised in profit or loss in the respective period. Reversals of the loss-recovery component adjust the contractual service margin, provided that the reversals are not changes in the fulfilment cash flows of the group of reinsurance contracts held.

The loss-recovery component is calculated by multiplying the recognised loss by the percentage of claims on the underlying insurance contracts that are expected to be recoverable. Upon subsequent measurement, the loss-recovery component is adjusted to reflect the changes in the underlying loss component of the underlying insurance contracts.

Insurance contracts issued that are assets

Insurance contracts issued that are recognised as assets under the accounting policies are presented separately from the liabilities at a portfolio level in the statement of financial position.

The recognition and measurement of insurance contracts issued that are assets follows the same procedure as for insurance contracts issued that are liabilities.

Reinsurance contracts held that are liabilities

Reinsurance contracts held that are recognised as liabilities due to application of the accounting policies are presented separately from the assets at a portfolio level in the statement of financial position.

The recognition and measurement of reinsurance contracts held that are liabilities follows the same procedure as for reinsurance contracts held that are assets.

Insurance contracts issued that are liabilities

Insurance contracts issued that are liabilities consist of the Liability for remaining coverage (LRC) and the Liability for incurred claims (LIC). Liability for remaining coverage (LRC)

The LRC comprises the payment obligations for insured events that have not yet occurred and for other insurance contract services that have not yet been provided. Under the GMM, the LRC is the sum of the present value of the risk-adjusted future cash flows (fulfilment cash flows – consisting of building blocks 1, 2 and 3) – and the contractual service margin (building block 4).

We remeasure the estimated present value of the future cash flows and the risk adjustment for non-financial risk at each reporting date on the basis of updated assumptions. In addition, we recognise the expected profit attributable to the provision of insurance coverage for a group of insurance contracts as a contractual service margin, and thus explicitly as part of the liability for remaining coverage. We adjust the contractual service margin for any changes in fulfilment cash flows relating to future services or establish a loss component and recognise it as an expense as soon as the contractual service margin has been depleted.

Under the PAA, in the case of profitable business the LRC is recognised upon initial measurement in a simplified way as the sum of premiums received less the acquisition cash flows paid, provided that the latter are not recognised directly as an expense. In other words, neither the present value of the future cash flows nor a risk adjustment for non-financial risk nor a contractual service margin is determined. Conversely, in the case of onerous groups of insurance contracts a loss component is recognised in line with the GMM and recognised under this balance sheet item. As part of subsequent measurement, we consider the time value of money and consequently achieve the greatest possible consistency with the application of the GMM. In addition, the liability for remaining coverage is discounted on the basis of historical yield curves as determined on initial recognition.

The LRC for groups of insurance contracts measured under the VFA consists of the sum of the present value of the risk-adjusted future cash flows and the contractual service margin. The determination of both the present value of the future cash flows and the risk adjustment for non-financial risk at initial measurement generally follows the requirements under the GMM. Special rules apply under IFRS 17 for subsequent measurement as per the VFA.

Liability for incurred claims

The LIC comprises the payment obligations for incurred claims that have not yet been settled, and for other insurance contract services already provided. It is measured by applying the first three building blocks of the GMM, i.e. by calculating the present value of the risk-adjusted future cash flows. We start by determining, based on our actuarial estimate, the requisite present value of the cash outflows expected to occur by the time the insured event has been definitively settled. The present value of the cash outflows reflects both the expected payments to the policyholder as well as our claims settlement expenses and administration costs. We add a risk adjustment for non-financial risk to the present value of the cash outflows to account for any remaining uncertainty as to the ultimate amount of claims or their payout dates.

In the context of estimates and in line with the LRC, we consider past experience and assumptions about future developments, including social, economic, or technological factors. By applying our actuarial projection methods, we ensure appropriate reserving for incurred claims at all times, near the upper end of adequate expected values.

We use current discount rates when discounting future cash outflows and use the option to recognise the effect of changes in financial inputs on measurement in other comprehensive income in equity. In this context, the measurement is based on different reference interest rates, depending on the specific measurement model used. Under the GMM, current discount rates are used to determine the fulfilment cash flows. By contrast, under the PAA the discount rates at the date of the incurred claim are used to measure fulfilment cash flows. When applying the PAA, we do not make use of the option to refrain from discounting under certain circumstances.

Changes in the measurement of the LIC arising from updated actuarial estimates or updated costs are recognised in profit or loss.

Particularly for participating life and health primary insurance business, the LIC primarily concerns payments to customers. We do not distinguish in our balance sheet presentation of technical liabilities between unit-linked life insurance contracts and other insurance contracts in the VFA scope.

Insurance service result

Insurance revenue is defined so as to facilitate comparisons with revenue in other industries; it also distinguishes between various sources of revenue with respect to the GMM and the VFA. Insurance revenue is the consideration we are expected to receive for the insurance contract services we provide; investment components are excluded from insurance revenue. An investment component is the amount that an insurance contract requires us to repay to the policyholder in all circumstances – regardless of whether an insured event occurs, e.g. either as a claim payment or as a participation in profit. An investment component is not recognised as insurance revenue and also the repayment of this amount is recognised with no impact on profit or loss. Particularly surrender values in primary insurance as well as performance-related or fixed commissions and profit commissions in reinsurance are investment components in our business, provided that we first receive the premium before such repayments are made to the policyholder. Excluding investment components from insurance revenue does not affect the insurance service result, as there are corresponding reductions in the insurance service expenses.

When applying the PAA, we recognise as insurance revenue the amount of expected premium receipts allocated to the period, while excluding any investment components and adjusted to reflect the time value of money. We allocate the expected premium receipts to each period on the basis of the expected pattern of release of risk during the coverage period.

The insurance service expenses comprise claims expenses in particular (without repayment of any investment components). We present administration and acquisition costs separately under “Insurance service expenses” in the income statement. Acquisition costs are recognised in insurance service expenses in the same amount as used to determine insurance revenue based on systematic allocation to the appropriate periods of the coverage period. We furthermore present changes in the underlying items separately under Insurance service expenses when applying the VFA.

Within the insurance service result, income or expenses from reinsurance contracts held are presented separately (insurance revenue ceded from reinsurance contracts held and income from reinsurance contracts held) and thus separately from insurance revenue and the insurance service expenses from insurance contracts issued.

(I) Financial liabilities

(i) Financial liabilities from investment contracts

This class includes investment contracts the financial liabilities of which are determined based on the market values of the securities linked to the investment contracts. Such financial liabilities are classified as at fair value through profit or loss upon acquisition. The Company has designated the liabilities to the category of at fair value through profit or loss because this eliminates or significantly reduces the accounting mismatch for assets and liabilities which would arise if gains and losses on the said assets and liabilities were recognised using different accounting policies. This class covers products that contain insignificant insurance risk. Insurance risk is assumed insignificant if sum insured at policy inception does not exceed 5% of first year premium.

(ii) Other financial liabilities

All other financial liabilities (trade payables, other current and non-current liabilities, loans received, debt securities issued) are initially recognised at their fair values and are subsequently measured at their amortised cost using the effective interest rate method. The amortised cost of current financial liabilities generally equals their nominal value; therefore, current financial liabilities are measured in the separate statement of financial position at the amount payable. Non-current financial liabilities are initially recognised

at the fair value of the transaction (less transaction costs). In subsequent periods, they are measured at their amortised cost using the effective interest rate method.

(m) Provisions and contingent liabilities

Provisions are recognised when the Company has a present obligation (legal or constructive) as a result of a past event, and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. Where the Company expects some or all of a provision to be reimbursed, the reimbursement is recognised as a separate asset, but only when the reimbursement is virtually certain. The expense relating to a provision is presented in the separate statement of profit or loss, net of any reimbursement (if any). If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, where appropriate, the risks specific to the liability. Where discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

(n) Vacation pays liability and other liabilities to employees

Payables to employees include the accrued vacation pay liability calculated in accordance with employment contracts and the legislation in force at the reporting date. The vacation pay liability includes associated social security tax and unemployment insurance contributions. The item also includes contractual termination benefits and associated social security tax.

Social security tax includes statutory national funded pension contributions. The Company has no legal or constructive obligation to make any pension or similar payments in addition to payments of social security tax.

(o) Taxes

The main rates of the taxes (other than income tax) applicable to the Company:

- Insurance Supervisory Commission maintenance fee of 0.234% as from January 2025 from insurance premiums written in Lithuania;
- Social insurance contributions of 1.77% in Lithuania, 23.59% in Latvia and 33,80% in Estonia on employment related income calculated for employees;
- Output value added tax of 21% in Lithuania, 21% in Latvia and 24% in Estonia calculated on sales income taxable by VAT, less input VAT;
- Real estate tax up to 1% in Lithuania, up to 0.5% in Latvia and 0% in Estonia calculated on the value of real estate;
- Pollution tax at the rates specified by the legislation.

Income tax expense comprises current and deferred tax. Income tax expense is recognised in profit or loss except to the extent that it relates to items recognised in equity.

Current tax is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted at the reporting date. In the reporting period, the corporate income tax rate in Lithuania was 16% (in the previous year tax rate was 15%). Activity in the Republic of Latvia and Estonia is not subject to corporate income tax. Instead of taxation on the profit of the current year, the tax is applied only upon profit distribution, i.e. upon payment of dividends.

Deferred tax is provided for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for tax purposes. Deferred tax is measured at the tax rates that are expected to be applied to the temporary differences when they reverse, based on the laws that have been enacted or substantively enacted by the reporting date.

A deferred tax asset is recognised to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realised.

In Latvia and Estonia, income tax is not levied on companies' profits. A new income tax legislation came in effect in Latvia on 1 January 2018. In accordance with the changed Latvian Income Tax Act, income tax is not levied on companies' profits but on dividends distributed. The tax rate in 2025 was 20/80 of the amount distributed as the net dividend (20/80 in 2024). In accordance with the effective Estonian Income Tax Act, income tax is not levied on companies' profits but on dividends distributed. The tax rate in 2025 was 20/80 of the amount distributed as the net dividend (20/80 in 2024).

The Company has undistributed profit in Latvia and Estonia, accrued after 1 January 2018, which would be taxed upon distribution. In accordance with paragraph 39 of IAS 12, the Company shall recognise a deferred tax liability for all taxable temporary differences associated with investments in subsidiaries, branches, and associates except the cases than recognition exception applies. The Company has determined that the recognition exception in paragraph 39 of IAS 12 does apply to it because it is not probable that the temporary difference will reverse in the foreseeable future, i.e. no distribution of undistributed profits in Latvia and Estonia are planned in the foreseeable future.

(p) Foreign currency transactions

Transactions in foreign currencies are recorded by applying the exchange rates of the European Central Bank at the dates of the transactions. At the reporting date, assets and liabilities denominated in a foreign currency are retranslated using the exchange rates of the European Central Bank ruling at that date. Exchange gains and losses are recognised in profit or loss in the period in which they arise.

(r) Capital management

As from 1 January 2016, the Company assesses capital adequacy based on Solvency II rules. Solvency II entails rules for calculating capital requirements and qualifying capital, risk management and internal control requirements, regulates the reporting of the risk and capital situation. The objective of capital management is to ensure the sustainability and stability of the Company protecting therewith the interests of policyholders and shareholders. Capital management is based on the management of the assets and liabilities of the Company and risks related thereto and consist of regular assessment of the compliance with the capital requirements established in the Insurance Activities Act. Based Insurance Activities Act, the Company should comply with the following requirements:

- The sum of eligible basic own funds shall not be smaller than the floor of the minimum capital requirement, which is EUR 6.7 million.
- The sum of eligible own funds shall not be smaller than the solvency capital requirement.

The Company has sufficient own funds which consists from ordinary share capital, share premium account related to ordinary share capital, retained earnings and revaluation reserve. According to the Solvency II rules, as at 31 December 2025, the eligible own funds exceed the solvency capital requirement by 1.93 times (1.96 times as at 31 December 2024).

(s) Offsetting and comparative figures

When preparing the financial statements, assets, and liabilities, as well as revenue and expenses are not set off, except for the cases when certain International Financial Reporting Standard specifically requires such set-off.

Note 4. New and revised International Financial Reporting Standards and new interpretations originated by the International Financial Reporting Interpretations Committee (IFRIC)

The financial statements are prepared based on the principles of consistency and comparability, ensuring that the Company consistently applies the same accounting policies and presentation of information. Any changes in accounting policies or presentation are made only when required by newly adopted or revised IFRS standards issued by the EU, or when a new accounting policy or presentation method provides a more objective view of the Company's financial position, performance, and cash flows.

Adoption of New and Revised IFRS Standards and Interpretations

The following new standards and amendments to existing standards, issued by the International Accounting Standards Board (IASB), have been adopted:

1. Amendments to IAS 1 - Presentation of Financial Statements: Classification of Liabilities as Current or Non-Current

Issued by the IASB on January 23, 2020, and October 31, 2022, these amendments clarify the classification of liabilities based on contractual arrangements in place at the reporting date. The 2020 amendments provide a general approach to liability classification, while the 2022 amendments focus on how conditions that must be complied with within twelve months of the reporting date affect the classification of a liability. The effective date for both amendments is set for annual periods beginning on or after January 1, 2024.

2. Amendments to IAS 7 - Statement of Cash Flows, and IFRS 7 - Financial Instruments: Disclosures: Supplier Finance Arrangements

Issued on May 25, 2023, these amendments introduce new disclosure requirements and enhanced qualitative and quantitative information about supplier finance arrangements.

3. Amendments to IFRS 16 - Leases: Lease Liability in a Sale and Leaseback

Issued on September 22, 2022, these amendments require a seller-lessee to measure lease liabilities arising from a leaseback in a manner that does not recognize any gain or loss related to the retained right of use. The new requirements do not prevent a seller-lessee from recognizing gains or losses in profit or loss related to the partial or full termination of a lease.

In the current year, the Company has adopted these amendments to IFRS standards, which became mandatory for reporting periods beginning on or after January 1, 2024. These amendments, as applicable to the Company's operations, have had no material impact on the financial statements or the disclosures made.

4. Amendments to IAS 21 - The Effects of Changes in Foreign Exchange Rates: Lack of Exchangeability

The amendments are effective for annual reporting periods beginning on or after January 1, 2025. The amendments specify how an entity should assess whether a currency is exchangeable and how it should determine a spot exchange rate when exchangeability is lacking. A currency is considered to be exchangeable into another currency when an entity is able to obtain the other currency within a time frame that allows for a normal administrative delay and through a market or exchange mechanism in which an exchange transaction would create enforceable rights and obligations. If a currency is not exchangeable into another currency, an entity is required to estimate the spot exchange rate at the measurement date. An entity's objective in estimating the spot exchange rate is to reflect the rate at which an orderly exchange transaction would take place at the measurement date between market participants under prevailing economic conditions. The amendments note that an entity can use an observable exchange rate without adjustment or another estimation technique.

New Standards and Interpretations Issued but Not Yet Effective

The following standards have been issued by the IASB but are not yet effective during the reporting period:

1. Amendments to IFRS 9 and IFRS 7 - Classification and Measurement of Financial Instruments

Issued on May 30, 2024, these amendments provide clarification regarding the classification of financial assets with environmental, social, and corporate governance (ESG) features, as well as the derecognition of financial assets and liabilities. Additional disclosure requirements for investments in equity instruments and contingent financial instruments are also introduced.

2. Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10, and IAS 7 - Annual Improvements to IFRS Accounting Standards - Volume 11

Issued on July 18, 2024, these amendments include clarifications and simplifications in various areas, such as hedge accounting, derecognition of financial instruments, disclosure of fair value and transaction price differences, credit risk disclosures, and lease liability derecognition.

3. IFRS 18 - Presentation and Disclosures in Financial Statements

Issued on April 9, 2024, this standard replaces IAS 1 and introduces new categories for financial reporting, including operating, investing, financing, income tax, and discontinued operations. It also enhances aggregation and disaggregation of financial data and requires disclosures on Management-defined Performance Measures (MPMs).

While these standards have been issued, they are not yet mandatory for the Company. A preliminary assessment indicates that their adoption is not expected to have a significant impact on the financial statements when first applied.

4. IFRS 19 - Subsidiaries without Public Accountability: Disclosures

Issued on May 9, 2024, this standard allows subsidiaries to provide reduced disclosures when applying IFRS Accounting Standards, and it outlines the disclosure requirements for subsidiaries that choose to apply it.

5. IFRS 14 - Regulatory Deferral Accounts

Issued on January 30, 2014, this standard allows first-time adopters of IFRS to continue recognizing regulatory deferral accounts under their previous GAAP when transitioning to IFRS.

6. Amendments to IFRS 10 and IAS 28 - Sale or Contribution of Assets between an Investor and its Associate or Joint Venture

Issued on September 11, 2014, these amendments clarify that, in transactions involving associates or joint ventures, the recognition of gains or losses depends on whether the assets sold or contributed constitute a business.

While these standards have been issued, they are not yet mandatory for the Company. A preliminary assessment indicates that their adoption is not expected to have a significant impact on the financial statements when first applied.

Note 5. Risk management

As part of the ERGO Group, ERGO is committed to turning risk into value. Risk management is an integral part of our corporate management with regard to achieving this goal. Risk management includes all strategies, methods, and processes to identify, analyse, assess, control, monitor and report the short and long term risks ERGO faces or may face in the future.

Risk management is performed at all levels of ERGO Group and is organized according to the three “lines of defence”: risk takers (1st line), Risk Management Function, Actuarial Function, Compliance Function (2nd line), and Internal Audit Function (3rd line).

The Company’s Risk Management Function is established to achieve main strategic goals from a risk management perspective:

- Maintain the financial strength, thereby ensuring that the liabilities to the clients are met;
- Protect and increase the value of the shareholders’ investment;
- Safeguard the reputation of the Company and ERGO Group.

The Company needs to take the right type of risks in appropriate amounts in order to achieve these goals. Therefore, risk awareness and prudent risk management are priorities. The Company puts a lot of effort in enhancing its risk management system. Own risk and solvency assessment, which covers all the processes and procedures employed to identify, assess, monitor, manage, and report the short- and long-term risks

forms an essential part of ERGO's risk management system. Own risk and solvency assessment integrates both the current status and outlook of the business strategy, risk strategy and capital management. The chapters below describe the main risks that the Company has to face due to the business model.

(a) Insurance risks

The insurance environment is regulated by the law of obligations and insurance activities legislation. As the Baltic countries are members of the EU, all legislation and regulations have to comply with relevant EU directives. Lithuania's, Latvia's, and Estonia's laws related to insurance supervision comply with the EIOPA directives prepared for Solvency II regime.

Insurance risk management is an integral part of the Company's risk management system. To ensure a balanced insurance portfolio, the Company has established product overview and governance, pricing and underwriting guidelines, which are updated on a regular basis. Insurance premiums and provisions are calculated on the basis of carefully selected actuarial assumptions. The milestones for evaluating underwriting portfolio risks differ depending on product group. The latter is described in more details in subsequent chapters.

Policies for mitigating insurance risk

The Company's insurance activity assumes the risk that a loss event involving a person directly related to an insurance contract will occur. The risk may relate life, health, accident, or other loss arising from an insured event whose time of occurrence and severity are unknown at the date the insurance contract is concluded.

Through its insurance and investment activities, the Company is also exposed to market risks.

The Company manages its insurance risk through strict underwriting policy, group-wide new product approval procedures and follow-up of current products, continuous check-up of consistency in reserving and underwriting rates.

The Company uses several methods to assess and monitor insurance risk. These methods include internal risk measurement models, sensitivity analyses, scenario analyses and stress testing.

The theory of probability is applied to pricing and calculating technical provisions. The principal risk is that the frequency and severity of claims is greater than expected. Insurance events are, by their nature, random, and the actual number and size of events during any year may vary from those estimated using statistical techniques.

The key risks associated with insurance services are underwriting risk and competitive market risk. The Company is also exposed to the risk of dishonest actions by policyholders.

Insurance risk management strategy

The Company's underwriting strategy seeks diversity to ensure a balanced portfolio. The Company believes that a large portfolio of similar risks ensures a better predictability of the outcomes.

Diversity among product groups is important as well. Key underwriting risks per policy group are as follows:

1 Products with guaranteed investment return in savings phase. The group of products is sensitive to mortality, lapse, investment environment and expense. The portfolio is mainly under run-off with very small volumes of new business. Risk capital for this product group remains on approximately the same level with slight decrease over time and more volatility is experienced if there are significant down / up movements of

risk-free rate. Proper cost evaluation is considered challenging aspect also due to long term projections which lead to expense estimation for the next 40 years.

Another challenging point to forecast is lapse due to different trends depending on company's strategy. Due to well diversified and coordinated life underwriting process, mortality profit margin is rather high and mortality risk is of minor importance.

2 Pension annuities in annuity payment phase (product with guaranteed investment return). The group of products is sensitive to longevity, investment and expense risks. Longevity risk is constantly growing due to increasing volume of pension annuities in annuity payment phase portfolio. Company's current experience cannot be considered sufficient in order to have prudent actual longevity estimates.

Investment risk is volatile if there are significant down / up movements of risk-free rate.

Expense risk is of minor importance due to rather constant expenses for annuity products.

3 Unit-linked products. The products are sensitive to mortality, disability-morbidity, accidental event, lapse, expense, and catastrophe risks. The products have longer duration than other non-annuity products, therefore main underwriting risks for unit-linked business are expense and lapse risks. The product is sensitive to disability-morbidity, accident event risk due to the current company's strategy to have risk covers added.

4 Risk products. The products are sensitive to mortality, disability-morbidity, accident event, lapse, expense, catastrophe risks. These products are reflected either under life or health similar to life underwriting risk modules.

The principles of insurance risk management are described in the Company's risk strategy.

Sensitivities

The following analysis is performed for reasonably possible movements in key assumptions with all other assumptions held constant, showing the impact on gross and net liabilities, profit before tax. The correlation of assumptions will have a significant effect in determining the ultimate claims liabilities, but to demonstrate the impact due to changes in assumptions, assumptions had to be changed on an individual basis. It should be noted that movements in these assumptions are non-linear. Sensitivity information will also vary according to the current economic assumptions, mainly due to the impact of changes to both the intrinsic cost and time value of options and guarantees. When options and guarantees exist, they are the main reason for the asymmetry of sensitivities. The method used for deriving sensitivity information and significant assumptions made did not change from the previous period. The impact on equity is equal to increase/decrease in profit.

As at 31 December 2025	Change in assumptions	Increase/(decrease) in gross liabilities	Increase/(decrease) in net liabilities	Increase/(decrease) in gross profit before tax	Increase/(decrease) in net profit before tax

Pricing risks

The premium rates and tariffs applied by the Company are usually calculated for a long-term, but their adequacy is checked on a regular basis. Premium rates and tariffs may be changed due to changes in claim incurrence statistics, market trends and the broadening or limitation of insurance cover. The Company has a routine procedure for changing premium rates and tariffs. Tariffs are calculated based on actuarial assumptions.

Therefore, there exists the risk that realistic parameters will not be in line with the assumptions set, thus making premium rates and tariffs insufficient. This risk is mitigated by checking the validity of assumptions applied in regular analyses.

Another pricing risk in life insurance is anti-selection risk. This risk is mitigated during the underwriting procedure or by setting special conditions in term and conditions.

Claim handling risks

Claim handling risk is of major importance for health insurance. The overriding principles of the Company's claims handling operations are transparency and prudence. Transparency assumes the clarity of the handling process and its compliance with the established guidelines. On the one hand, this is in the customer's best interests and on the other, it allows monitoring and checking the handling process. The risks inherent in the process are mitigated by the absence of cash risk and applying proper quality controls, separating the process into stages, and observing signature rules.

In line with the principle of prudence each reported claim is evaluated on an individual basis taking into account the circumstances surrounding the claim, the information obtained during the handling process and historical evidence about the size of similar claims. The nature of the business makes it very difficult to predict with certainty the likely outcome of any particular claim and the ultimate cost of reported claims. Therefore, case estimates are reviewed regularly and updated as and when new information becomes available. However, the ultimate liabilities may vary as a result of subsequent developments. The impact of many factors affecting the ultimate loss is difficult to estimate. Provision estimation difficulties, which differ by class of business, depend also on the terms of the underlying insurance contract, claim complexity and size, determination of the date of occurrence, and reporting lag.

Reinsurance strategy

The Company reinsures a certain part of the risks for which it provides insurance cover under insurance contracts. The purpose of reinsurance is to reduce the Company's share of large losses and to limit the potential net loss through the diversification of risks. The main contract form in reinsurance is obligatory proportional reinsurance. Risks exceeding the limits of obligatory reinsurance contracts or falling outside their scope are reinsured on a facultative basis.

Concentration risks

Within the insurance process, concentration risk may arise where a particular event or series of events has a strong impact on the company's liabilities. Such concentration may arise from a single insurance contract or through a large number of related contracts.

(b) Market, credit, and liquidity risks

ERGO pursues an investment strategy that is largely based on the characteristics of the maturity and currency structure of its liabilities. In addition to return, safety and creditworthiness, investment decisions consider liquidity, diversification and above all, the structure of the insurance liabilities. The principles of managing the risks related to financial assets are embedded in the Company's risk management policy and observed in the predetermined risk appetite, strategic investment of assets and specific risk management processes.

The Company manages its asset risk by preparing a new investment policy on an annual basis. Implementation of the strategy and adherence to restrictions is monitored by a multi-level structure. In 2025 tactical decisions were made and implemented by GIM – Group Investment Management department of Munich RE. The compliance of investments with the adopted strategy is monitored by the asset and liability management team (AL Team) which, in addition to asset manager, consists of the Company’s actuaries, investment officers, risk manager, head of planning and controlling department and the members of the Board. Many ERGO group entities are also involved in planning, monitoring, and managing investment risks.

Market risk

One of the most important risks related to financial assets is a decrease in the value of the investment portfolio, caused by the volatility of market prices.

The significant market risks are evaluated within the Solvency II Standard Formula. That means that assets and liabilities are revalued for each simulated market scenario, thus showing the probability distribution for changes to basic own funds in accordance with Solvency II.

Additionally, exposure to fluctuations in market value is assessed on an ongoing basis using one internal model. Net Loss Limit (NLL) monitors the probability of achieving a result that surpasses the minimum investment result fixed by the actuaries. Credit Value at Risk (CVaR) measures the potential loss that a portfolio of assets, exposed to credit risk, could suffer due to a weakening of the issuer’s credit rating.

Clearly defined processes ensure that the company can respond timely to any significant capital market developments.

(a) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in interest rates.

The Company’s investments comprise mostly fixed-income securities, the market value of which is influenced by changes in interest rates. As at 31 December 2025, the weighted average purchase yield to maturity of fixed-income portfolio was 2.01% (2.03% as at 31 December 2024).

If as at 31 December 2025 the entire yield curve would have increased/decreased by 100 basis points, then fair value reserve would have decreased/increased by EUR 7.6 million (2024: EUR 8.5 million). Reduced impact is related to smaller fixed income portfolio and lower modified duration of the portfolio.

In order to manage interest rate risk Company has adopted cash flow matching principle i.e. liabilities maturing in 10 years are covered with 10-year bond. Therefore, changes in fair value reserve and equity do not convey entire economic situation of the Company as it describes movements only on asset side but not in liabilities. In order to understand Company’s financial situation, one should look at Solvency II balance sheet where both assets and liabilities are marked-to-market.

Investments in financial instruments and cash exposed to interest rate risk, by interest rate

<i>in EUR</i>	2025	2024
	Carrying amount	Carrying amount

No interest	136,588,258	123,720,690
In total	286,745,414	279,542,780

(b) Other price risk

Other price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices of equities and funds available for sale (other than those arising from interest rate risk and currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.

If as at 31 December 2025 the value of investments in equity and fixed income and real estate funds had increased/decreased by 10%, the Company's equity would have increased/decreased by EUR 1.77 million (2024: EUR 1.7 million).

Changes in the economies of different geographical areas may also affect the fair values of financial assets connected with those areas.

(c) Currency risk

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

Most of the Company's liabilities in different currencies are covered with assets denominated in the same currencies. Currency risk is countered by monitoring that no uncovered currency exposure exceeds 10% of asset manager assets.

At the end of reporting period, The Company has insignificant amount of assets and liabilities exposed to currency risk.

Credit risk

The credit risk of investments is the risk that the issuer of a security will not honour/fulfil its obligations. The risk is mitigated by acquiring securities from issuers with a high credit rating. The following table describes the Company's debt securities portfolio by the issuer's credit rating. At the year-end, the weighted average rating of fixed-income securities was A (A in 2024). The Company believes that its credit risk exposure to other financial assets is low due to their small proportion.

IFRS 9 calls for using an expected credit loss model to recognise impairment losses, under which expected credit losses are anticipated before they arise and must be recognised as an expense. A three-stage impairment model is used to recognise and measure impairment losses on financial assets. The key parameters for calculating expected credit losses are the probability of default, the loss given default and the exposure at default.

Probability of default is calculated on the basis of rating model, which takes account of not only historical information, but also current market conditions and the relevant forward-looking information (such as forecast macroeconomic developments). Rating categories are based on those of the leading international rating agencies. For financial assets allocated to Stage 1 of the impairment model, the probabilities of default are always calculated on the basis of the risk of default for the next 12 months. If the instrument's remaining maturity is less than one year, the probability is determined for this maturity.

Probabilities of default for maturities of more than one year used to determine lifetime expected credit losses at Stage 2 are determined by extrapolating migration matrices of default probabilities for the next 12 months. Financial assets allocated to Stage 3 of the impairment model are always analysed on a case-by-case basis.

The loss given default and the exposure at default are likewise factored into calculations of expected credit losses. In this context, the loss given default is derived from the recovery and default studies published by rating agencies. The exposure at default corresponds to the gross carrying amount as at the reporting date.

The financial instruments and cash presented in the table below have at least one rating of the respective rating group provided by one of the named rating agencies. A rating of a parent company is presented for cash and cash equivalents.

	2025	Standard & Poor's	AAA	AA	A	BBB	Not rated	Amount

Other receivables	6,030,851	5,287,799	27,200	161,794	11,507,644
In total	15,832,837	6,041,265	111,076	844,472	22,829,650

In its insurance activities, the Company's main credit risk is payment default by a policyholder. The Company's credit risk arises principally from its insurance receivables. In each business line, risk management measures are applied to protect the Company's financial position. The Company has rules in place for consistently monitoring and managing overdue receivables. Receivables that are more than 180 days overdue are written down. Impairment of receivables from policyholders is presented in Note 15.

To mitigate the risk arising from reinsurance, the Company enters into obligatory reinsurance contracts only with such reinsurers whose equity amounts to at least EUR 250 million and rating is above A– (according to Standard & Poor's). Facultative reinsurance contracts are concluded with such reinsurers only that have been included in the list approved by the relevant department of ERGO group. In addition, premiums ceded to any one reinsurer may not exceed 10% of ERGO's annual gross premium income.

Liquidity risk

The Company has to be able to discharge its payment obligations at any time. This is ensured by liquidity planning that is embedded in the asset and liability management model.

To be able to meet its settlement commitments at any time, the Company needs to know its liabilities and has to acquire a suitable investment portfolio. This is achieved by close cooperation between actuaries, the investment manager and the AL Team.

The debt securities portfolio is composed by taking into account liability cash flows with the aim to build asset portfolio with similar cash flow structure. In addition, a large share of the Company's assets is invested in highly liquid securities, which should ensure the availability of sufficient cash even under stressed circumstances. At the year-end, the Company's liquid funds totalled EUR 286.7 million (2024: EUR 279.5 million), including available-for-sale securities of EUR 134.5 million (2024: EUR 140.0 million), equities and fund units of EUR 132.1 million (2024: EUR 113.2 million), loans of EUR 15.7 million (2024: EUR 15.7 million), and cash and cash equivalents of EUR 4.5 million (2024: EUR 10.5 million).

Investments in financial instruments and cash (by maturity):

As at 31 December	2025	2024
<i>in EUR</i>		
Total contractual cash flows	286,745,414	279,542,780
No maturity	136,588,258	123,720,690
Up to one year	10,744,390	10,551,942
2–3 years	30,249,745	19,685,344
4–5 years	26,711,870	29,746,216
6–10 years	50,648,381	61,687,692
11–15 years	17,725,194	17,866,042
16 years and more	14,077,576	16,284,854

At the year-end, the weighted average duration of fixed income portfolio was 5.6 years (2024: 6.2 years). There were no non-cash movements in the portfolio.

Financial liabilities (based on maturities):

As at 31 December 2025 <i>in EUR</i>	Up to 2 years	Between 2 and 5 years	Between 6 and 10 years	More than 10 years	In total

In total	40,501,291	32,433,711	75,776,204	107,017,511	255,728,718

All of the Company's other financial assets and financial liabilities except for financial liabilities arising from insurance contracts are current, i.e. with a maturity of up to one year.

Liquidity risk is mitigated through asset and liability management. The main market risk is a potential investment return insufficiency to cover guaranteed investment return for liabilities. The risk is mitigated by cautious asset and liability cash flow matching.

Strategic risks

Strategic risks may result from wrong business decisions or poor execution of decisions already made. We also regard reluctance to adapt to changes in the environment (e.g. the legal environment) as a strategic risk.

The main strategic risks stem from quality of IT landscape and changing regulatory expectations that could jeopardize achievement of strategic results. Economic turmoil and geopolitical tensions also increase uncertainty and complexity of environment the company operates in. Market volatility, driven by a softening market and unfavourable changes in tax regulations, poses significant risks to revenue growth and profitability. Additionally, the rapid pace of digitalization continues to heighten cyber and information security risks, increasing the company's exposure to potential threats. Striking a balance between corporate governance, cost control, and business needs remains a challenge, as it directly impacts operational and financial efficiency, raises operational risks, and may jeopardize strategy execution and long-term stability. The strategy of ERGO continues to address the risk environment adequately.

Strategic risks are mitigated by integrating risk management processes into the adoption of strategic decisions, particularly into the preparations and decisions made during the planning process.

As part of strategic risk management, we identify the most significant risks, which are assessed and monitored at the level of the management board. Where necessary, the management board determines the appropriate risk mitigation measures. In the case of all significant risks the company appoints the persons responsible for the implementation of measures.

Operational risk

Operational risks are an inevitable part of the company's business operations. They have to be mitigated or, where possible, avoided if it is economically practicable. Operational risks result from inadequate processes, failures in communication or information technology, and external factors such as natural disasters and legal risks.

In operational risk management, ERGO focuses on the following areas:

- resources, particularly information technology and infrastructure;
- personnel and processes;
- projects.

Operational risk management is underpinned by qualitative and quantitative assessment. Risks related to business processes are managed through relevant processes and appropriate control of IT applications used. Company-level control activities also ensure compliance with legal and regulatory requirements.

Through the internal control system, the company has identified, analysed, and assessed both company-wide risks and the risks inherent in the key processes, including IT risks. There are measures in place for improving risk control and mitigating risks. The company's internal control and risk management systems deal with both risks arising from everyday operations as well as compliance and financial reporting risks. The model adopted allows identifying risks that are common to different departments and processes. Operational risks are identified, analysed, and assessed on a regular basis.

We mitigate the risks resulting from business processes with process, IT, and company level controls. Process level controls include authorisation systems, the four-eye principle, segregation of duties, rules, and regulations, etc. IT controls include backup solutions, access controls and incident management planning. The purpose of company level controls is to assess whether all requirements of an adequate and appropriate control environment are met.

The continuity of critical business processes and systems in emergency or crisis situations is ensured by well-designed incident management, an appropriate crisis management structure and adequate disaster recovery concepts.

To mitigate personnel risk, the company has established guidelines for avoiding conflicts of interest. The risk of corporate misconduct is counteracted by a system of powers and authorities, the segregation of duties, internal regulations, and random tests of business transactions.

Although operational risks are mainly managed through the above processes, some risks (either individually or in combination with others) may have such an extensive impact on a specific process and the company as a whole that the company's ability to carry on its regular business activities is put at risk (business interruption). Therefore, significant risk events are evaluated separately to increase awareness of such incidents and highlight their potential impact.

Reputational risk

Reputational risk is the risk that negative publicity regarding ERGO's business practices or operations, whether true or not, will cause a situation where trust in the company is lost. Reputational risk may arise as a result of some other risk (e.g. operational risk, strategic risk, or concentration risk) or together with other risks. Thus, reputational risks are controlled indirectly, through the control of other risks.

Reputational risk can occur in a number of different ways: directly as a result of the company's actions, indirectly due to the actions of an employee or tangentially through third parties.

ERGO has identified two subcategories of reputational risk:

- data and information;
- communication risk.

Reputational risk related to the unauthorised disclosure of confidential information stays continuously high. Reputational risks are identified by three methods:

- preparation of extraordinary reports;
- regular quarterly communication between the risk management team and other relevant parties, e.g. the compliance control, internal audit, and corporate communication teams;
- the internal control system where the evaluation of every operational risk is accompanied by the assessment of potential damage to reputation.

Risk takers – process owners – determine the measures including the implementation plans required for minimising and managing risk. Depending on relevance and significance, they may consult with other relevant parties such as the compliance control or internal audit teams and inform them about the measures determined. The measures for mitigating the most important reputational risks are discussed and approved by local management. The management of ERGO Group AG and Munich Re or relevant committees are notified of measures adopted according to need.

The greatest reputational risks are added to the company's risk profile and the company prepares quarterly risk reports on them. The company has put in place a special reporting system to make sure that (potential) reputational risks are reported without delay.

Risk controllers – the compliance control and internal audit teams – evaluate reputational risk using their own methods and report all actual or anticipated reputational risks they have identified to the risk management team and other responsible stakeholders.

Note 6. Insurance revenue

The table below presents an analysis of the total insurance revenue recognised in the period:

<i>in EUR</i>		2025	2024
Expected insurance service expenses incurred in the period	a	17,998,582	14,641,743
Allocation of the portion of premiums that relate to the recovery of insurance acquisition cash flows	b	5,007,592	3,910,262
Change in the risk adjustment for non-financial risk	c	213,145	140,977
Amount of CSM recognised in profit or loss	d	3,335,167	4,057,445
Realisation of premiums attributable to current period (PAA)	e	47,104,745	42,969,210
Insurance revenue		73,659,231	65,719,637

- Expected insurance service expenses incurred in the period comprise claims and other expenses which the Company expects to pay on insured events that occurred during the period.
- Acquisition cash flows are allocated in a systematic way on the basis of the passage of time over the coverage period of the group of contracts.
- Change in risk adjustment shows amount of risk which expired during the period.
- The CSM is recognised in profit or loss over the coverage period of the corresponding group of contracts based on coverage units.
- Insurance revenue from insurance contracts measured using the premium allocation approach.

Note 7. Insurance service expense

The table below shows the insurance service expenses

<i>in EUR</i>		2025	2024
Insurance service expenses from insurance contracts issued		63,561,188	55,024,995
Claims expenses	a	41,342,914	35,112,757
Changes that relate to past service - adjustments to the LIC	b	-2,308,848	-2,484,627
Administration and acquisition costs	c	17,994,315	16,207,498
Changes from underlying items	d	6,190,323	6,070,372
Other insurance service expenses	e	342,485	118,995

- Incurred claims and benefits excluding investment components.
- Any LIC remeasurements relating to insurance and other non-financial risk with respect to claims incurred in prior periods (such as changes in expense level assumptions).
- Administration and acquisition costs are presented separately. For VFA/GMM models acquisition costs are recognised in insurance service expenses in the same amount as used to determine insurance revenue based on systematic allocation to the appropriate periods of the coverage period. For PAA model both administration and acquisition costs are directly recognised in P&L.
- Some changes in fulfilment cash flows, risk adjustment, estimates of the present value of future cash flows and loss component are closely tied to changes in underlying items. These changes are recognized as insurance service expenses because they reflect the costs incurred in providing services in the period, including incurred claims.
- Changes that relate to future service (i.e. losses/reversals on onerous groups of contracts from changes in the loss components) and other changes have not mentioned above.

Note 8. Net expense from reinsurance contracts held

The table below shows an analysis of the net expenses from reinsurance contracts held recognised in the reporting period:

<i>in EUR</i>	Note	2025	2024
Allocation of reinsurance premiums		1,385,806	988,783
Expected recovery for insurance service expenses incurred in the period	a	235,032	367,144
Net cost/gain recognised in profit or loss	b	1,150,774	621,640
Amounts recoverable from reinsurers for incurred claims		-124,175	539,305
Amounts recoverable for claims and other expenses incurred in the period		94,311	370,380
Changes in amounts recoverable arising from changes in liability for incurred claims		-218,486	168,925
Net expense from reinsurance contracts held		1,509,981	449,478

- a. Expected recovery for insurance service expenses incurred in the period comprise recovery for claims and other expenses which the Company expects to receive from reinsurers on insured events occurred during the period.
- b. Net cost/gain recognised in profit or loss during the coverage period of the corresponding group of reinsurance contracts held based on coverage units.

Note 9. Total Investment income and net insurance finance result

<i>in EUR</i>	2025	2024
Amounts recognised in the profit loss		
Interest revenue calculated using the effective interest method	2,953,628	3,030,605
Other interest and similar income	2,982,761	1,405,651
Net fair value gains/(losses) on financial assets at fair value through profit or loss Unit link	6,071,383	7,074,406
Net fair value gains/(losses) on financial assets at fair value through profit or loss	-947	809,369
Net fair value gains/(losses) on derecognition of financial assets measured at fair value through other comprehensive income	128,307	151,858
Impairment loss on financial assets	4,526	19,163
Investments management expenses	-278,181	-282,302
Net foreign exchange expenses income	-86,685	43,729
Total amounts recognised in the profit or loss	11,774,793	12,252,479
Amounts recognised in OCI	-1,244,625	558,062
Total investment income	10,530,169	12,810,540
Insurance finance income/ (expenses) from insurance contracts		
Interest accreted to insurance contracts	-807,744	-1,026,458
Expenses caused by changes in fair value of underlying assets (VFA)	-10,661,575	-9,429,034
Amounts recognised in profit or loss	-11,469,319	-10,455,492
Amounts recognised in OCI	3,218,931	-851,360
Total insurance finance income/ (expenses) from insurance contracts issued	-8,250,388	-11,306,851
Reinsurance finance income/ (expenses) from insurance		
Interest accreted to reinsurance contracts	873,009	107,895
Amounts recognised in profit or loss	873,009	107,895
Amounts recognised in OCI	0	0
Total Reinsurance finance income/ (expenses) from insurance contracts issued	873,009	107,895
Total net investment income, insurance finance expenses and reinsurance finance income	3,152,789	1,611,584
Represented by:		
Amounts recognised in profit or loss	1,178,483	1,904,882
Amounts recognised in OCI	1,974,306	-293,298

Reinsurance finance income or expenses is defined as the change in the effect of the time value of money arising from the passage of time and the effect of changes in financial assumptions on the carrying amounts of reinsurance contracts recognised in the statement of profit or loss.

Note 10. Other income and expenses

<i>in EUR</i>	2025	2024
Other income		
Gain on disposal of property and equipment	770	8,000
Fees, commissions, and charges received	320	1,288
Rental income	40,674	95,836
Miscellaneous income ¹	290,390	282,096
Total result from other income	332,154	387,220
Expenses		
Membership fees to Financial Supervision Authority and professional associations	225,107	210,026
Audit and non-audit services and legal permits ³	142,149	173,281
Business licenses and permits	250,792	164,943
Write down of other intangible assets	9,029	34,234
Losses on sale of property and equipment	7,350	0
Finance lease interest payments	61,690	55,109
State fees, stamp duties and late payment interest	-1,437	3,355
Other expenses non-attributable to the insurance portfolio ²	1,741,441	1,427,696
Total result from expenses	2,436,121	2,068,644
Total result from other income and expenses	2,103,967	1,681,424

¹ Miscellaneous income contains various services rendered and other non-regular income

² Other expenses non-attributable to the insurance portfolio contains other personal expenses, training expenses, not related to certain product marketing expenses, product development expenses, etc

³ Within this amount in 2025 audit services amounted to 114,118 euros and non-audit services (assistance with translation of financial statements) – 3,200 euros (respectively in 2024 – 74,278 euros and 3,200 euros)

Note 11. Cash and cash equivalents

The balance of cash and cash equivalents consists of demand deposits with banks.

As of 31.12.2025 the bank accounts of ERGO Life Insurance SE amounted to 4,477,287 euros (31.12.2024: 10,504,975 euros), of which 4,236,761 euros were in euros (31.12.2024: 10,258,961 euros) and 240,526 euros in dollars (2024: 246,014 euros).

Note 12. Investments in financial instruments

<i>in EUR</i>		2025	2024
As at 31 December	Note		
Equity and debt instruments at fair value through profit or loss	14.1	132,110,971	113,215,715
Debt instruments at fair value through other comprehensive income	14.2	134,458,923	140,123,857
Total		266,569,894	253,339,572
Debt instruments at amortised cost			
Debt instruments at amortised cost	14.3	15,698,233	15,698,233
Total Debt instruments at amortised cost		15,698,233	15,698,233
In total		282,268,126	269,037,805

12.1. Equity and debt instruments at fair value through profit or loss

<i>in EUR</i>	As at 31 December 2025		As at 31 December 2024	
	Cost	Fair value	Cost	Fair value
Units in listed equity funds	2,319,148	2,996,067	2,249,325	2,647,117
Units in listed debt funds	645,683	648,055	531,833	538,462
Units in unlisted equity and debt funds	0	0	5,280	6,084
Infrastructure debt funds	6,643,592	6,085,680	6,515,569	6,397,120
Real estate funds	6,586,768	7,944,107	7,005,446	8,218,602
Unit-linked	95,432,943	114,437,061	82,137,509	95,408,330
In total	111,628,134	132,110,971	98,444,962	113,215,715

Fund units have been classified as equity and debt instruments at fair value through profit or loss. Unrealised gains and losses on fund units are recognised in profit and loss statement.

Unit-linked financial assets have been classified as at fair value through profit or loss, these financial assets were designated to that category on initial recognition.

12.2. Debt instruments at fair value through other comprehensive income

Debt and other fixed-income securities have been classified as debt instruments at fair value through other comprehensive income. Changes in the fair value of those financial assets are recognised in other comprehensive income or expenses. Interest income is recognised using the effective interest rate method.

<i>in EUR</i>	As at 31 December 2025		As at 31 December 2024	
	Cost	Fair value	Cost	Fair value
Debt instruments at fair value through other comprehensive income				
Government bonds	103,828,818	95,215,232	105,462,106	98,433,070
Financial institutions' bonds	21,251,350	20,514,551	22,765,470	22,042,480
Other debt securities	19,553,167	18,729,140	20,826,068	19,648,307
In total	144,633,334	134,458,923	149,053,644	140,123,857

Fair values of debt instruments at fair value through other comprehensive income and their dynamics during the period:

<i>in EUR</i>	2025	2024
As at 1 January	140,123,857	147,006,089
Purchased debt securities	11,051,566	4,830,456
Disposed debt securities	-10,642,019	-7,794,027
Received on maturity date debt securities	-4,387,967	-5,186,627
Amortisation of debt securities	-240,962	989,402
Change in revaluation reserve	-1,111,780	721,445
Net realised gains	-138,570	-225,961
Net realised loss	10,263	81,333
Change in interest accrued	-149,134	-328,203
Currency revaluation	-56,330	29,949
As at 31 December -	134,458,923	140,123,857

Debt instruments comprise government bonds, debt securities issued by financial institutions and companies and other debt securities.

The fair value of debt securities is determined by reference to the Bloomberg Generic (BGN) Prices available on the information systems of Bloomberg. Where BGN prices are not available, fair value is determined by reference to quoted market prices. If there is a broker on the market whose price quotation includes the quantity purchased, that quotation is relied on. If a quotation including the quantity purchased is not available, one without quantity is used. If a debt security does not have a listed price, valuation models are applied. If the models cannot be used or it would be impracticable, the security is measured at cost. As at 31 December 2025 and 2024, the portfolio did not include any debt securities measured at cost or using valuation models.

Cash movements related to debt securities are presented in the separate statement of cash flows. Non-cash movements such as changes in the fair value reserve are presented in the table above.

12.3. Debt instruments at amortised cost

Debt instruments at amortised cost by maturity

<i>in EUR</i>		
As at 31 December	2025	2024
4 years and more	15,698,233	15,698,233
In total	15,698,233	15,698,233

As of 31 December 2025, the following loans were issued:

EUR 15,500,000 (31 December 2024: EUR 15,500,000) to ERGO Insurance SE, of which EUR 198,233 were accrued interest. The first loan of EUR 6,000,000 was granted in 2021 at 1.29% fixed interest per year for the period 2021–2026 and variable interest of 1.42%+12-month Euribor from the period 2026–2031. The loan matures on 30 December 2031. The second loan of EUR 9,500,000 was granted on 27 June 2022 at 3.85% fixed interest per year for the period 2022–2027 and variable interest of 1.98%+12-month Euribor for the period 2027–2032. The loan matures on 22 June 2032.

Note 13. Investments in subsidiaries

Investment in subsidiary: 100% of the shares of the company ERGO Invest SIA, the acquisition cost of which is EUR 4,677,870. The head office of ERGO Invest SIA is situated at Unijas 45, Riga, the Republic of Latvia.

The Company assessed the impairment of its investment in the subsidiary and, taking into account the fact that the subsidiary was profitable and owns real estate with a market value exceeding the amount of the investment, concluded that there were no indications of impairment.

in EUR

Carrying amount of investment in subsidiary	
As at 31 December 2023	4,677,870
Assets acquired	0
Disposed assets -	0
Written off assets -	0
Reclassified assets +/-	0
As at 31 December 2024	4,677,870
Assets acquired	0
Disposed assets -	0
Written off assets -	0
Reclassified assets +/-	0
As at 31 December 2025	4,677,870

The main financial information (unaudited) of ERGO Invest SIA as at 31 December 2025 was the following (EUR):

Assets	Liabilities	Equity	Revenue	Result of the year
3,412,045	112,534	3,286,399	607,962	13,112

Note 14. Insurance and reinsurance contracts

According to IFRS 17.95 an entity shall aggregate or disaggregate information so that useful information is not obscured either by the inclusion of a large amount of insignificant detail or by the aggregation of items that have different characteristics. Company presents information aggregated to insurance contracts issued and reinsurance contracts held.

14.1. Insurance contracts issued and reinsurance contracts held

The variable fee approach applied to majority of insurance contract issued portfolios – conventional life insurance, term-life insurance, unit-linked insurance. The profit allocation approach applied to health insurance. The general measurement model applied to reinsurance contracts held.

14.1.1. Roll-forward of net asset or liability for life insurance contracts issued showing the liability for remaining coverage and the liability for incurred claims

14.1.1.1. Insurance contracts issued

The tables below show the changes in carrying amounts of the insurance contracts issued broken down by liability component. The reconciliation tables therefore show the changes between the opening and closing balances for the liability for remaining coverage and the liability for incurred claims. The liability for remaining coverage is split into the liability for remaining coverage excluding the loss component and the loss component. Changes in the liability components arise from the insurance service result, investment components, insurance finance income or expenses, other value changes, changes recognised in other comprehensive income, and changes in cash inflows or outflows.

Insurance contracts (gross) - Movement in liabilities	2025			
	Liability for remaining coverage		Liability for incurred claims	Total
	Excluding loss component	Loss component		
Opening balance - insurance portfolios in asset position	-17,563,083	0	611,965	-16,951,118
Opening balance - insurance portfolios in liability position	219,120,817	0	8,024,435	227,145,252
Opening balance	201,557,733	0	8,636,400	210,194,134

14.1.1.2. Reinsurance contracts held

The following table present the changes during the fiscal year, broken down by asset components, for reinsurance contracts held that are measured using the general measurement model and the premium allocation approach. The reconciliation tables thus show the changes from opening to closing balances for the assets for remaining coverage and the assets for the recovery of incurred claims. The assets for remaining coverage are broken down further into assets with and without a loss-recovery component. Changes in the asset components arise from the insurance service result, investment components, insurance finance income or expenses, other value changes, changes recognised in other comprehensive income, and changes in cash inflows and outflows.

Reinsurance contracts held - Movement in liabilities / assets	2025			
	Expected recovery (remaining coverage)		Expected recovery for incurred claims	Total
	Excluding loss-recovery component	Loss-recovery component		
Opening balance - insurance portfolios in asset position	555,613	0	581,347	1,136,960

14.1.2. Roll-forward of the net asset or liability for insurance contracts issued and reinsurance contracts held showing estimates of the present value of future cash flows, risk adjustment and CSM

14.1.2.1. Insurance contracts issued

The tables below show how the measurement components that make up the liability for remaining coverage and the liability for incurred claims changed during the fiscal year. The reconciliations show the changes from the opening to the closing balances for the measurement components of the present value of the expected net cash flows, risk adjustment and the contractual service margin. Changes in the measurement components also arise from the insurance service result, investment components, insurance finance income or expenses, other changes in value and changes in cash inflows and outflows. Consequently, the tables reveal which changes arose in the present values of expected net cash flows and in the risk adjustment for non-financial risk during the year and how these changes affected the contractual service margin.

The measurement components include the entire liability from insurance contracts issued which were measured using the general measurement model and the variable fee approach, and the liability for incurred claims for insurance contracts issued which were measured using the premium allocation approach.

The liability for remaining coverage for insurance contracts issued which were measured using the premium allocation approach is not included. When applying the premium allocation approach, neither the present value of expected net cash flows nor a risk adjustment for non-financial risk or a contractual service margin for the liability for remaining coverage are explicitly determined.

Insurance contracts (gross) - Movement in components	2025			
	Estimates of the present value of the future cash flows ²	Risk adjustment for nonfinancial risk	Contractual Service Margin	Total

14.1.2.2. Reinsurance contracts held

The table below show the changes in the measurement components of reinsurance contracts held in the fiscal year that are measured using the general measurement model and the premium allocation approach. The measurement components include all elements of reinsurance contracts held that are measured using the general measurement model. In this reconciliation, the present value of the future net cash flows and the risk adjustment for our insurance portfolios measured using the premium allocation approach only includes the assets for the recovery of incurred claims.

Reinsurance contracts held - Movement in components		2025			
		Estimates of the present value of the future cash flows	Risk adjustment	Net cost/gain	Total

14.2. Liability for remaining coverage

In the following table, we present the underwritten or acquired insurance contracts recognised in the fiscal year for the first time in which the general measurement model and the variable fee approach are predominantly used in order to explain the change in the contractual service margin. Reinsurance contracts held, which are measured under the general measurement model are initially recognised from the transition. The underwritten insurance contracts issued and recognised in the fiscal year for the first time had the following amounts.

Insurance contracts issued

2025 <i>In euros</i>	Contracts issued		Total	
	Non-Onerous	Onerous		
Estimates of the present value of future cash inflows	-44,026,879		0	-44,026,879
Estimates of the present value of future cash outflows	41,267,498		0	41,267,498
Expected future claims, expenses, and investment components	38,619,080			38,619,080
			0	
Expected insurance acquisition cash flows	2,648,418		0	2,648,418
Risk adjustment	258,889		0	258,889
Contractual Service Margin	2,500,492		0	2,500,492
Total		0	0	0

2024 <i>In euros</i>	Contracts issued		Total	
	Non-Onerous	Onerous		
Estimates of the present value of future cash inflows	-25,982,797		0	-25,982,797
Estimates of the present value of future cash outflows	17,798,754		0	17,798,754
Expected future claims, expenses, and investment components	12,252,543			12,252,543
			0	
Expected insurance acquisition cash flows	5,546,212		0	5,546,212
Risk adjustment	338,008		0	338,008
Contractual Service Margin	7,846,035		0	7,846,035
Total		0	0	0

The table below shows our forecast of the recognition in profit or loss of the contractual service margin for insurance contracts issued that are measured under the general measurement model or the variable fee approach, including the corresponding revenue recognised. The recognition of the contractual service margin in profit or loss will influence the amount of insurance revenue, and thus the insurance service result and the amount of the liability for remaining coverage, in subsequent reporting periods.

The following tables present the effects on the contractual service margin resulting from the initial measurement of insurance contracts issued that were measured at the transition date applying the full retrospective, modified retrospective, and fair value approaches. This disclosure is only relevant for insurance contracts measured under the general measurement model or the variable fee approach. The associated insurance revenue also includes insurance contracts issued measured as at the transition date by applying the premium allocation approach.

As at 31 December 2025	5,972,316	0	5,972,316

There were no write-downs of intangible assets during the financial year (2024: EUR 37,541). As at 31 December 2025, the cost of fully amortised assets still in use was EUR 3,992,201 (as at 31 December 2024: EUR 4,106,974).

Note 17. Property, plant, and equipment

Property, plant, and equipment comprise tangible assets employed in the Company's activity, the useful life of which exceeds one year, and land and buildings that are in the Company's own use. Items of property and equipment are depreciated using the straight-line method.

As at 31 December 2025, the cost of fully depreciated items still in use was EUR 613,077 (31 December 2024: EUR 603,252). ERGO Life Insurance SE has only such items of property and equipment that are in the Company's own use.

Note 18. Financial liabilities from investment contracts

Financial liabilities from investment contracts are determined based on the market values of the securities linked to the investment contracts. The following table present movements in the liabilities.

As at 31 December	2025	2024
Financial liabilities from investment contracts		
Opening balance	18,522,237	16,110,998
Payments received	6,085,799	4,675,262
Fees and service charges	-1,318,268	-515,222
Provisions and payments made	-2,174,398	-2,119,177
Change in value, interest accrued	1,568,583	370,376
Closing balance	22,683,953	18,522,237

Note 19. Leases

The Company uses office premises, office equipment and cars under operating leases. In 2025, operating lease expenses on premises totalled EUR 27,569 (2024: EUR 16,489). These lease agreements on initial recognition and analysing new agreements of 2025 were recognised as low-value or short-term leases under IFRS 16. No operating lease expenses on other assets were incurred (in 2024, no operating lease expenses on other assets were incurred).

Leases as lessee (IFRS 16)

The Company leases office premises, office equipment, and IT equipment under operating leases. Most lease contracts for office premises are of indefinite duration. The expected contract end dates are assessed by responsible persons according to business forecasts. For some leases, contract conditions provide for an increase in the rental price according to a pre-agreed index.

IT and office equipment lease contracts have contract terms of two to four years. Information about leases for which the Company is a lessee is presented below.

Right-of-use assets and lease liabilities

Right of use assets related to leased properties that do not meet the definition of investment property are presented as property and equipment (see Note 17 "Property, plant and equipment").

	Buildings	Equipment and other items	In total
2025			
Balance as of 1 January	1,334,750	344,742	1,679,492
Depreciation for the year	-510,164	-139,319	-649,483
Additions to right-of-use assets	1,149,579	86,590	1,236,169
Disposal of right-of-use assets	-44,620	-11,050	-55,670
As of 31 December 2025	1,929,545	280,963	2,210,508

	Buildings	Equipment and other items	In total
2024			
Balance as of 1 January	1,237,529	184,556	1,422,085
Depreciation for the year	-487,498	-117,514	-605,013
Additions to right-of-use assets	662,041	295,281	957,322
Disposal of right-of-use assets	-77,322	-17,581	-94,903
As of 31 December 2024	1,334,750	344,742	1,679,492

Some office rent agreements were terminated during the year, and some new contracts were concluded.

Set out below are the carrying amounts of lease liabilities and their dynamics during the period:

<i>in EUR</i>	2025	2024
As of 1 January	1,717,123	1,443,231
Additions	1,237,358	862,421
Increase in interest	61,690	55,109
Payments	-610,718	-643,637
Write-offs and disposals	-56,860	0
As of 31 December 2025	2,348,593	1,717,124

Amounts recognised in profit or loss

2025 Leases under IFRS 16	2025
Interest on lease liabilities	61,690
Depreciation for the year	649,483
Expenses relating to short-term leases	4,273
Expenses relating to leases of low-value assets	23,297

2024 Leases under IFRS 16	2024
Interest on lease liabilities	55,109
Depreciation for the year	605,013
Expenses relating to short-term leases	2,758
Expenses relating to leases of low-value assets	13,731

In accordance with IFRS 16, in 2019 and in subsequent periods the Company recognises depreciation and interest costs in relation to the mentioned lease instead of recognising operating lease expenses. Interest rate used for discounting lease payments was in the range from 0.25% to 3.72% as of 31 December 2025 (2024: in the range 0.21% to 3.85%). When measuring right-of-use assets, the Company assessed each contract separately.

Maturity analysis of lease liabilities

Note 21. Shareholders and issued capital

	Number of shares	Total issued capital
As at 31 December 2024	15,124	4,380,213
As at 31 December 2025	15,124	4,380,213

Ordinary shares carry all the rights provided for under the Law on Companies of the Republic of Lithuania – the right to participate in the general meeting, distribution of profits and distribution of residual assets upon the dissolution of the company; the right to receive information from the management board about the activities of the company; a pre-emptive right to subscribe for new shares in proportion to the proportionate value of the shares already held when share capital is increased, etc. The Company’s articles of association provide that upon the transfer of shares, other shareholders have a pre-emptive right before third parties. Under the Articles of Association, shares may be pledged only subject to the consent of the Board.

The sole shareholder of ERGO Life Insurance SE is ERGO International AG (registry number HRB 40871, address ERGO-Platz 1, 40198 Dusseldorf, Germany). The shareholder of ERGO International AG is ERGO Versicherungsgruppe AG.

The consolidated financial statements of ERGO Versicherungsgruppe AG, prepared in accordance with International Financial Reporting Standards, are available at www.ergo.de. The parent of ERGO Versicherungsgruppe AG group is Münchener Rückversicherungs-Gesellschaft AG, the shares of which are listed on German stock exchanges.

As at 31 December 2025, the authorised capital consists of 15,124 ordinary registered shares with a nominal value of EUR 290 each. The entire share capital has been paid in.

Note 22. Capital reserve

Capital reserve as at 31 December 2025 consisted of the following: share premium – EUR 15,129,289, legal reserve – EUR 450,591, and other reserves – EUR 289,621 (as at 31 December 2024: share premium – EUR 15,129,289, legal reserve – EUR 450,591, and other reserves – EUR 289,621).

The authorised capital of the Company is booked, as per Articles of Association of the Company. The amount paid, by which the sales price of the shares issued exceeds the nominal value of the shares, is booked as share premium. Share premium accounts may be used for increase of the authorised capital of the Company, as well as to cover losses.

Reserves are formed by distributing profit of the current and previous year by a decision of the General Meeting of Shareholders, in line with the legislation and legal acts of the Republic of Lithuania as well as the Articles of Association of the Company. Legal reserves are compulsory reserves formed of the profit for distribution. The Company shall transfer to the legal reserve 5% of the profit for distribution until the reserve makes up 10% of the Company's issued capital. The legal reserve may be used only for covering losses of the Company. The share of the legal reserve in excess of 10% of the issued capital may be distributed when distributing the profit for the succeeding financial year.

As at the end of 2025, the Company had fully formed its legal reserve.

Note 23. Fair value reserve

The fair value reserve comprises the net change in the fair value of financial assets measured at fair value through other comprehensive income. When a financial asset is derecognised, the cumulative gain or loss previously recognised in equity is recognised in profit or loss.

<i>in EUR</i>	2025	2024
As at 1 January	-8,929,855	-9,487,917
Derecognised from equity and recognised in profit or loss in connection with sale and impairment	-110,656	3,241
Derecognised from equity and recognised in profit or loss in connection with redemption and impairment	4,896	0
Net change in fair value recognised in other comprehensive income or expense during the year	-1,138,864	554,822
As at 31 December	-10,174,479	-8,929,855

Note 24. Insurance/Reinsurance Finance Reserve (IFIE)

The IFIE mostly arises from the adjustments to the liability for the insurance contract under the VFA, reflecting the changes in the value of the underlying items to which the policyholder has direct participation. The mirroring approach requires the insurer to adjust the insurance contract liability in response to changes in the fair value of the underlying assets, which directly impacts the amount recognized in the IFIE.

Key points regarding IFIE under VFA and the mirroring approach:

Changes in the fair value of the underlying assets: These changes are reflected in the insurer's share of the underlying items and, consequently, the IFIE. The insurer's share of the fair value of the underlying assets (e.g., investment funds or portfolios) is recognized as part of the liability.

Recognition in the statement of financial position: The IFIE represents the difference between the insurance contract liability and the amounts recognized for the policyholder's share of the underlying assets. It reflects the present value of the future cash flows associated with the contract, adjusted for changes in the fair value of the underlying items.

Impact on the Contractual Service Margin (CSM): The CSM is also impacted by changes in the fair value of the underlying items. Under the mirroring approach, adjustments to the insurance contract liability due to changes in these assets affect both the fulfillment cash flows and the IFIE, which are recognized in the statement of financial position.

As of 31.12.2025 Insurance Finance Reserve was EUR 10,258,183 (2024: EUR 7,039,252). Reinsurance Finance Reserve was – EUR 0 (2024: – EUR 0).

Note 25. Income tax

Corporate income tax consists of current and deferred tax.

In 2025, the Company incurred a tax loss of EUR 2,975, 844

For calculation of corporate income tax in the Republic of Lithuania in 2025 a profit tax rate of 16% was applied. In 2024 a profit tax rate was 15%.

Under the Corporate Income Tax Law of the Republic of Latvia, corporate income tax is imposed only on distributed profits or deemed distributions, while undistributed and reinvested profits remain exempt. The statutory income tax rate is 20%, applied to a grossed-up tax base (net distribution divided by a coefficient of 0.8), resulting in an effective tax rate of 25% on distributed profits.

During the reporting period, the Company distributed profits through dividend payments, which triggered corporate income tax in accordance with Latvian law. As a result, current corporate income tax expense and corresponding tax liability have been recognized for the reporting period.

Deferred tax is provided for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for tax purposes. The amount of deferred tax depends on the expected future use of the asset and the settlement of future liabilities and substantially enacted tax rate expected to apply.

A deferred tax asset is only recognised to the extent that it is probable that the future taxable profits will be available against which the asset can be utilised. Deferred tax asset recognised as at 31 December 2025: EUR 122,270 (31 December 2024: EUR 119,067). For calculation of deferred tax profit tax rate of 17 % was applied (in year 2024 – 16 %).

The Company's lease payments are deductible upon payment for tax purposes. In accounting for the deferred tax relating to the lease, the Company considers both the lease asset and liability separately. The Company separately accounts for the deferred taxation on the taxable temporary difference and the deductible temporary difference, which upon initial recognition are equal and offset to zero. Deferred tax is recognised on subsequent changes to the taxable and temporary differences.

Note 26. Related party transactions

The Company considers parties to be related if one controls the other or exerts significant influence on the other's operating decisions. Related parties include:

- the parent company ERGO International AG and the ultimate controlling party Münchener Rückversicherungs-Gesellschaft AG;
- associates;
- other companies belonging to the same group;
- members of the Company's management and supervisory board and individuals with a significant shareholding, except where the above cannot exert significant influence on the Company's operating decisions.

In addition, related parties include close family members of and companies related to the above.

On 15 June 2021, the Company made first investment into MEAG alternative investment fund MEAG Infrastructure Debt Fund II (LU2182118013). As of 31.12.2025 Company has made investments into the fund in amount of 6.6 million euros (2024: EUR 6.5 million). Company's total commitment is EUR 8,000,000.

MEAG Infrastructure Debt Fund II invests in selected infrastructure projects in Germany, Europe and USA. These projects can be implemented in any segment, e.g. transport, energy supply, renewable energy, communication, or social infrastructure. MEAG, together with the experts from Munich Re, carries out a due diligence process for all projects before deciding to invest in certain assets.

Remuneration of key management personnel

Key management personnel of the Company includes director of the Company. The summary of remuneration of key management personnel for the year is as follows:

	2025	2024
Salary	83,335	83,301
Social security contributions	0	0
Other short-term employment benefits	0	0
Bonuses	0	0
Total remuneration of key management personnel	83,335	83,301

The amounts disclosed in the table are the amounts recognised as an expense during the reporting period related to key management personnel.

The remuneration, performance bonuses and benefits provided to the members of the Board for the year totalled EUR 547,419 (2024: EUR 502,496). The chair of the Board receives remuneration only as the Company's director. The members of the Supervisory Board were not remunerated.

The remuneration of a member of the Board consists of fixed remuneration and performance benefits. Performance benefits depend on the achievement of targets and objectives that are agreed between the chair of the Supervisory Board and each member of the Board before the beginning of the financial year.

² Including interest of EUR 449,090 (2024: EUR 866,520) on the loan provided to ERGO Insurance SE.

Note 27. Contingencies

As at 31 December 2025 the Company was not involved in any legal procedures which, in the opinion of Management, could have a significant influence on the separate financial statements.

The Company has remaining commitment to invest up to 0.5 million euros in the MEAG Infrastructure Debt Fund II. The capital would be called when the asset manager signs a loan agreement with another infrastructure Company.

The liability is qualified as a commitment and is not reflected in the Company's financial statements.

Note 28. Events after the reporting date

After the end of the financial year and until the approval of the financial statements, there were no significant events, which should be disclosed in the financial statements except that in Lithuania, in year 2026, profit tax rate of 17 % will be applied.

As of 1 January 2026, Lithuania introduced a Defence contribution of 10% on certain insurance premiums. For life insurance, the contribution is applied exclusively to health-related products, while long-term savings and investment-linked life insurance products are exempt. This regulatory change is intended to support national defence funding. The Company continues to monitor the financial impact of the contribution on its operations and results.

Escalating geopolitical tensions in the Middle East, particularly the risk of broader conflict involving Iran, Israel and United States of America, have increased uncertainty in global financial and energy markets. These developments may heighten volatility, disrupt supply chains, and pose potential risks to economic stability and capital market performance.

Since the beginning of the conflict, the yield curve has shifted upwards, reflecting rising inflation expectations. However, at this stage, the majority of market participants appear to expect a relatively swift resolution. In the event of a prolonged conflict and disruptions to energy exports from the region, there could be further upward pressure on inflation expectations, which would, in turn, negatively impact bond prices.

While such developments do not directly affect the P&L statement, they do impact the revaluation reserve and other comprehensive income (OCI). However, given the cash flow matching principle and the buy-and-hold investment strategy, this is expected to represent only a temporary setback.
